History of KIAS Pyeong Chang Summer Institute Cosmology and Structure Formation

Open KIAS Summer Institute 2009

Issues on Galaxy Formation

2009. 8. 19-23 평창 봄여름가을겨울 팬션

자유롭고 여유 있는 분위기에서 특정 분야·주제를 놓고 심도 있는 과학적 토론을
함으로써 후진들에게 토론 문화를 경험케 하고, 여러 연구자와의 접촉을 통해
다양한 학문적 경험 기회를 부여함.

최신 이슈에 대한 토론을 통해 연구주제 창출과 공동연구 진작.

알려진 지식보다 알려지고 있는 지식/모르고 있는 사실
과학적 사고의 표현력
프로시딩 - 질문과 대답 / 생각의 공유

마무리하며

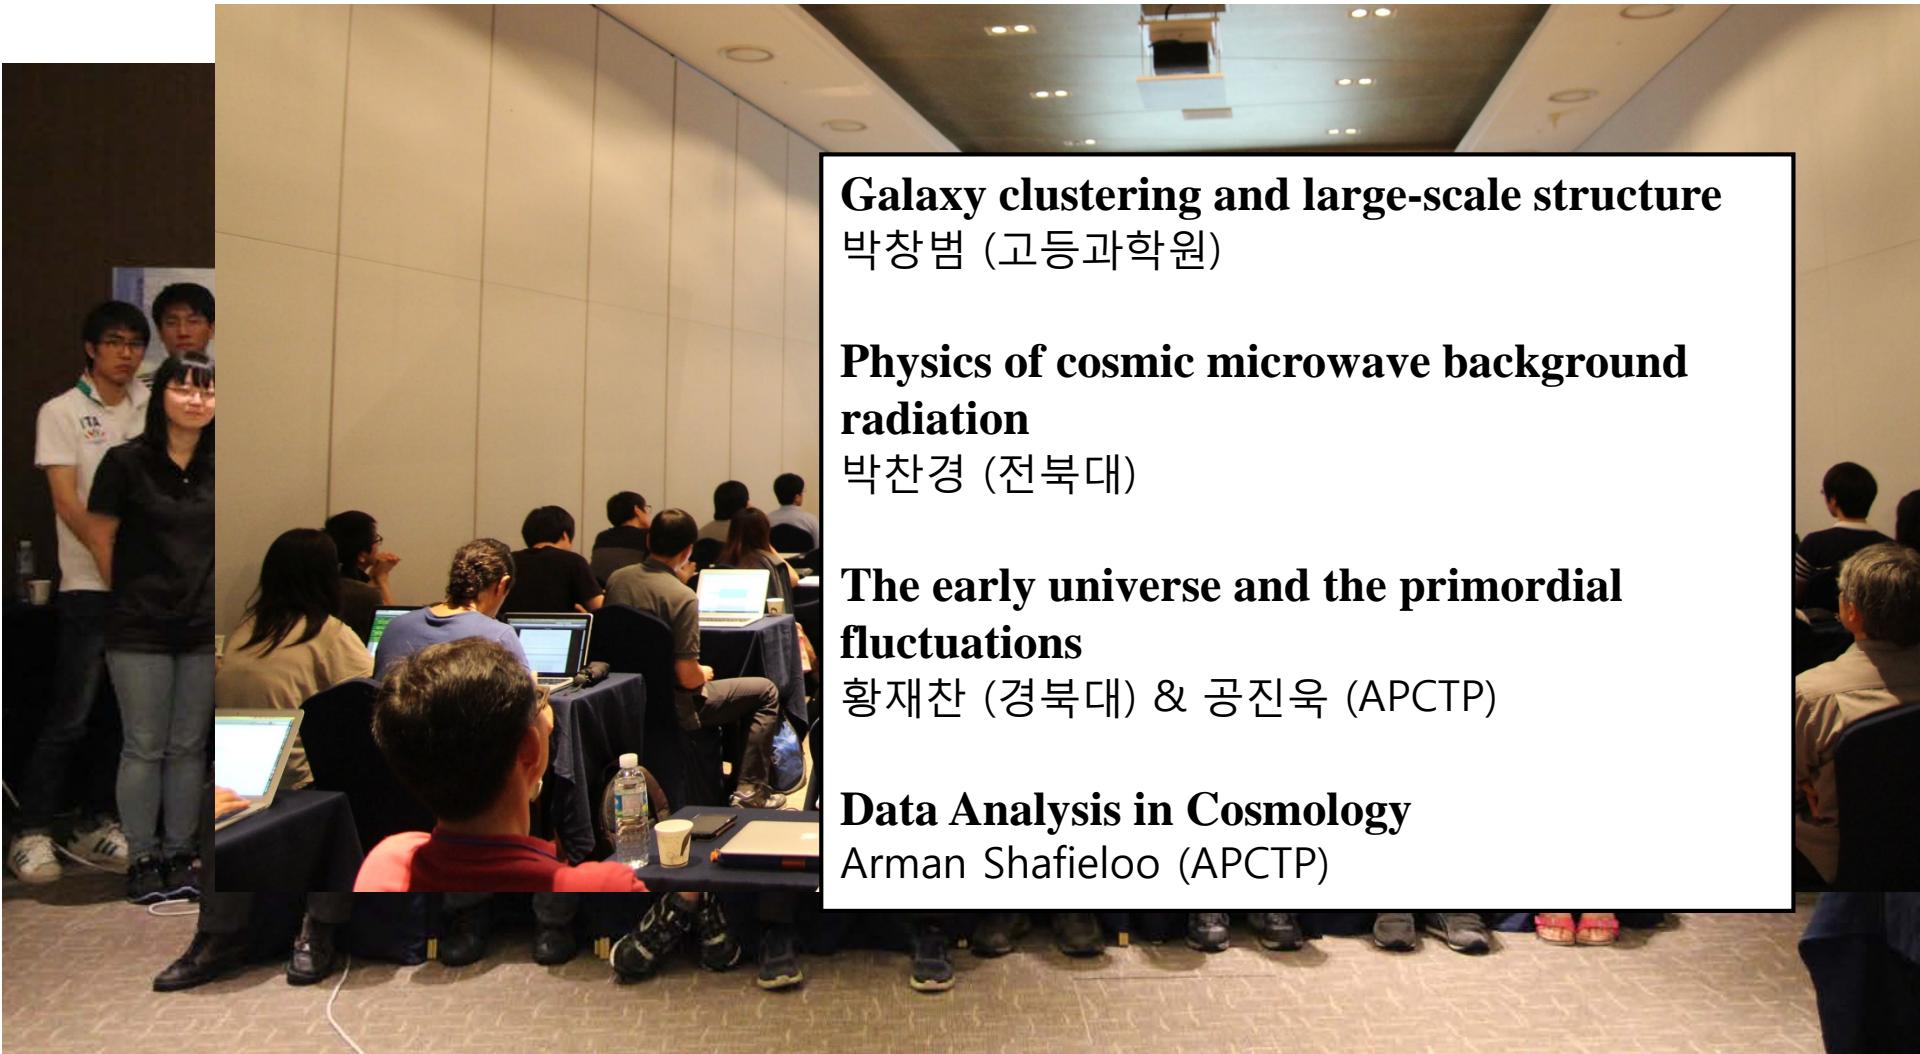

지난 사흘 간 이곳 횡성의 깊은 계곡 속에서 참으로 행복했습니다. 학문의 동반자 선생님들과 이를 이어받아 가는 후진들이 힘을 모아 하나의 행위 예술을 이룬 것입니다. 수 천년 유구한 천문학의 역사를 지닌 우리 속의 디엔에이가 오랜 갈증의 끝에 봄비를 맞은 나무처럼 꽃 피어나는 것 같았습니다. 또 누구와도 자신의 지식을 나누며 함께 나아가는 선량한 마음들을 볼 수 있어 참 좋았습니다.

이번에도 여러분들의 적극적인 참여가 빛나는 모임이었습니다.감사를 드립니다. 2년 뒤에 다시 모여서 또 한 편의 예술을 만들어 보기로 합시다.

Cosmology and Structure Formation

Introduction to Large-scale Structures of the Universe

Comoving distance [$h^{-1} \text{ Mpc}$]

500
400
300
200
100

There are **BIG** structures in the universe !

Definition of LSS

Clustering of astronomical objects is a rule!

star+planets+etc. → planetary system ($\sim 10^{-9}$ Mpc; bound)

stars(+gas) → star clusters ($\sim 10^{-5}$ Mpc; bound or unbound)

stars+gas+dark matter → The Milky Way Galaxy ($\sim 10^{-2}$ Mpc)

Galaxies → galaxy groups (a few bright galaxies; $\sim 10^0$ Mpc; not relaxed),
galaxy clusters (100-10s bright galaxies; $\sim 10^0$ Mpc; \sim relaxed)

Clusters+groups → superclusters (a few clusters; $\sim 10^{+1}$ Mpc)

Large-scale structure of the universe (no exact definition)

= Any structure in the distribution of galaxies larger than clusters.

Properties of large-scale structures of the universe

Size: > about 10Mpc.

Shape: amorphous (superclusters, filaments, walls, voids..)

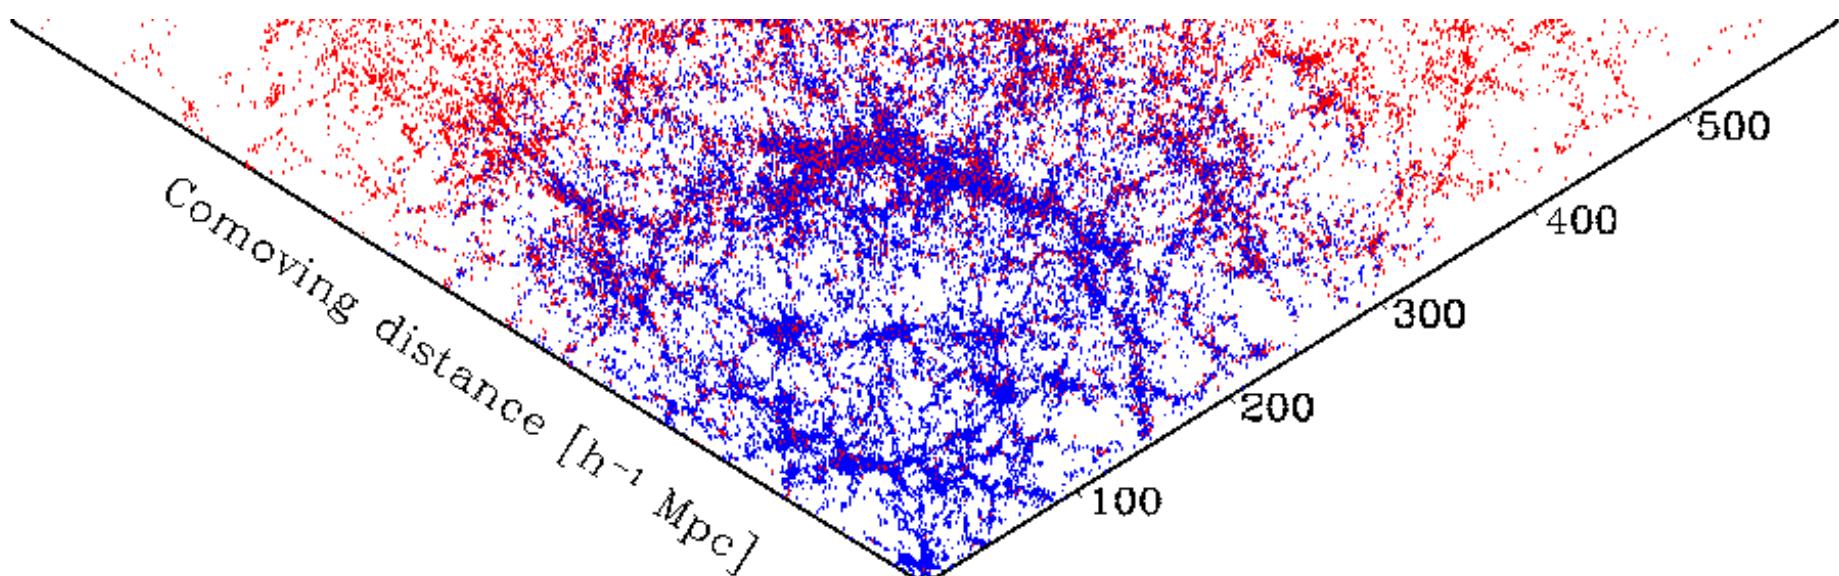

Dynamics: Participating in cosmic expansion, but gravitationally evolving.

Examples: CfA Great Wall

(~ $100 h^{-1}$ Mpc; CfA-2 survey; de Lapparent et al. 1986)

Sloan Great Wall (~ $300 h^{-1}$ Mpc; SDSS survey; Gott et al. 2005)

Bootes void (~ $60 h^{-1}$ Mpc; Kirshner et al.)

Large-scale Structures of the Universe

Overall shape - Sponge, Network, Web

Over-density Large-scale Structures

- Wall, Pancake, Sheet
- Filament, Chain
- Supercluster

Under-density Large-scale Structures

- Tunnel
- Void, Cell, Bubble

2. History of LSS observation

First large galaxy catalogs (till the 1970s)

Shapley & Ames (1932)

Zwicky et al. (1961-1968)

Lick catalog of galaxies (Shane & Wirtanen 1967)

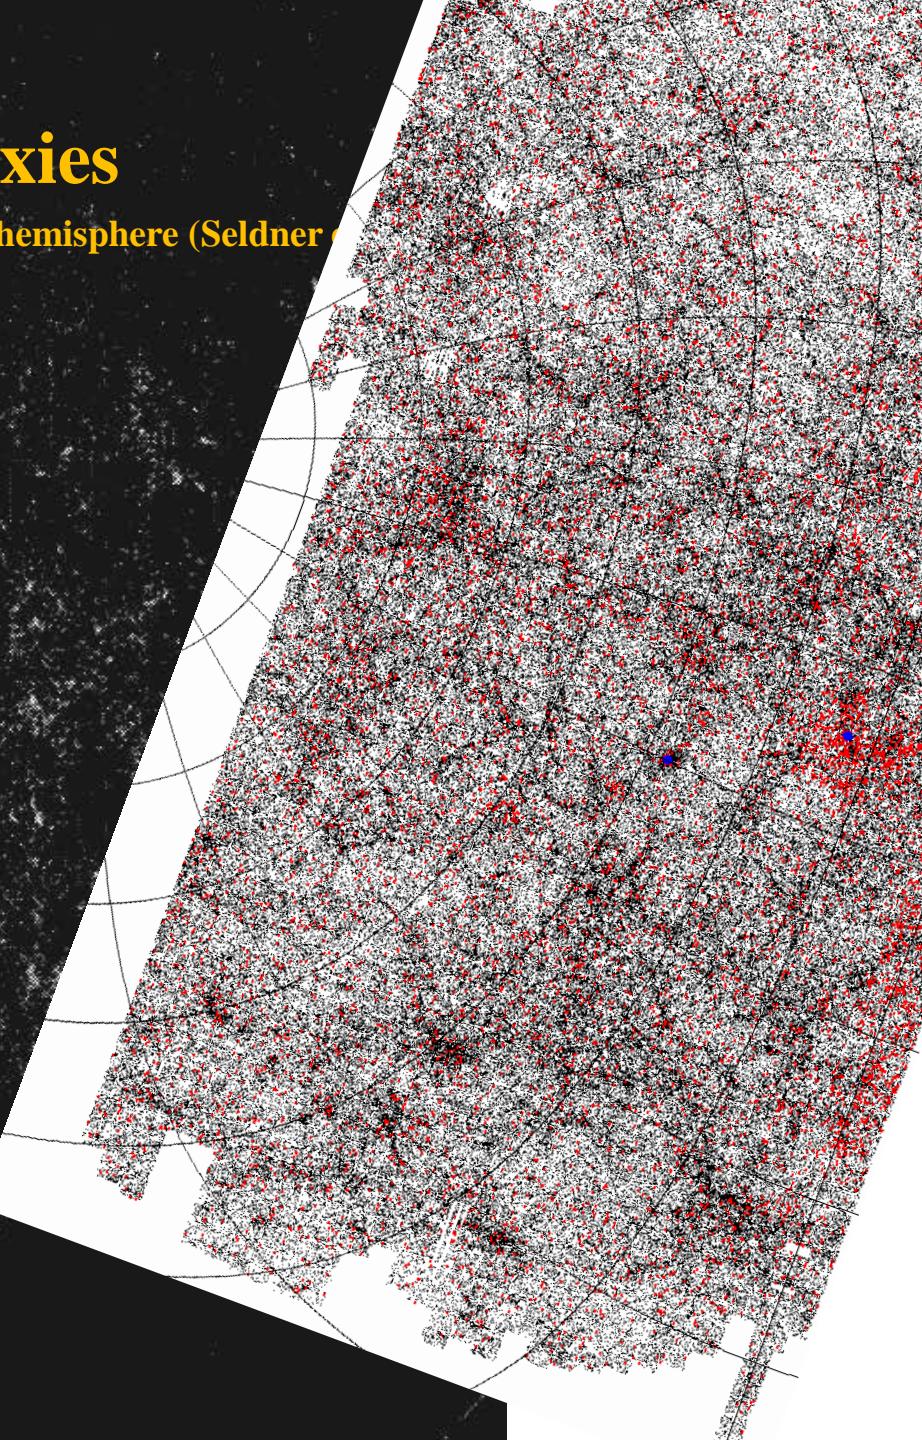

→

Large-scale structure in the distribution of galaxies noticed

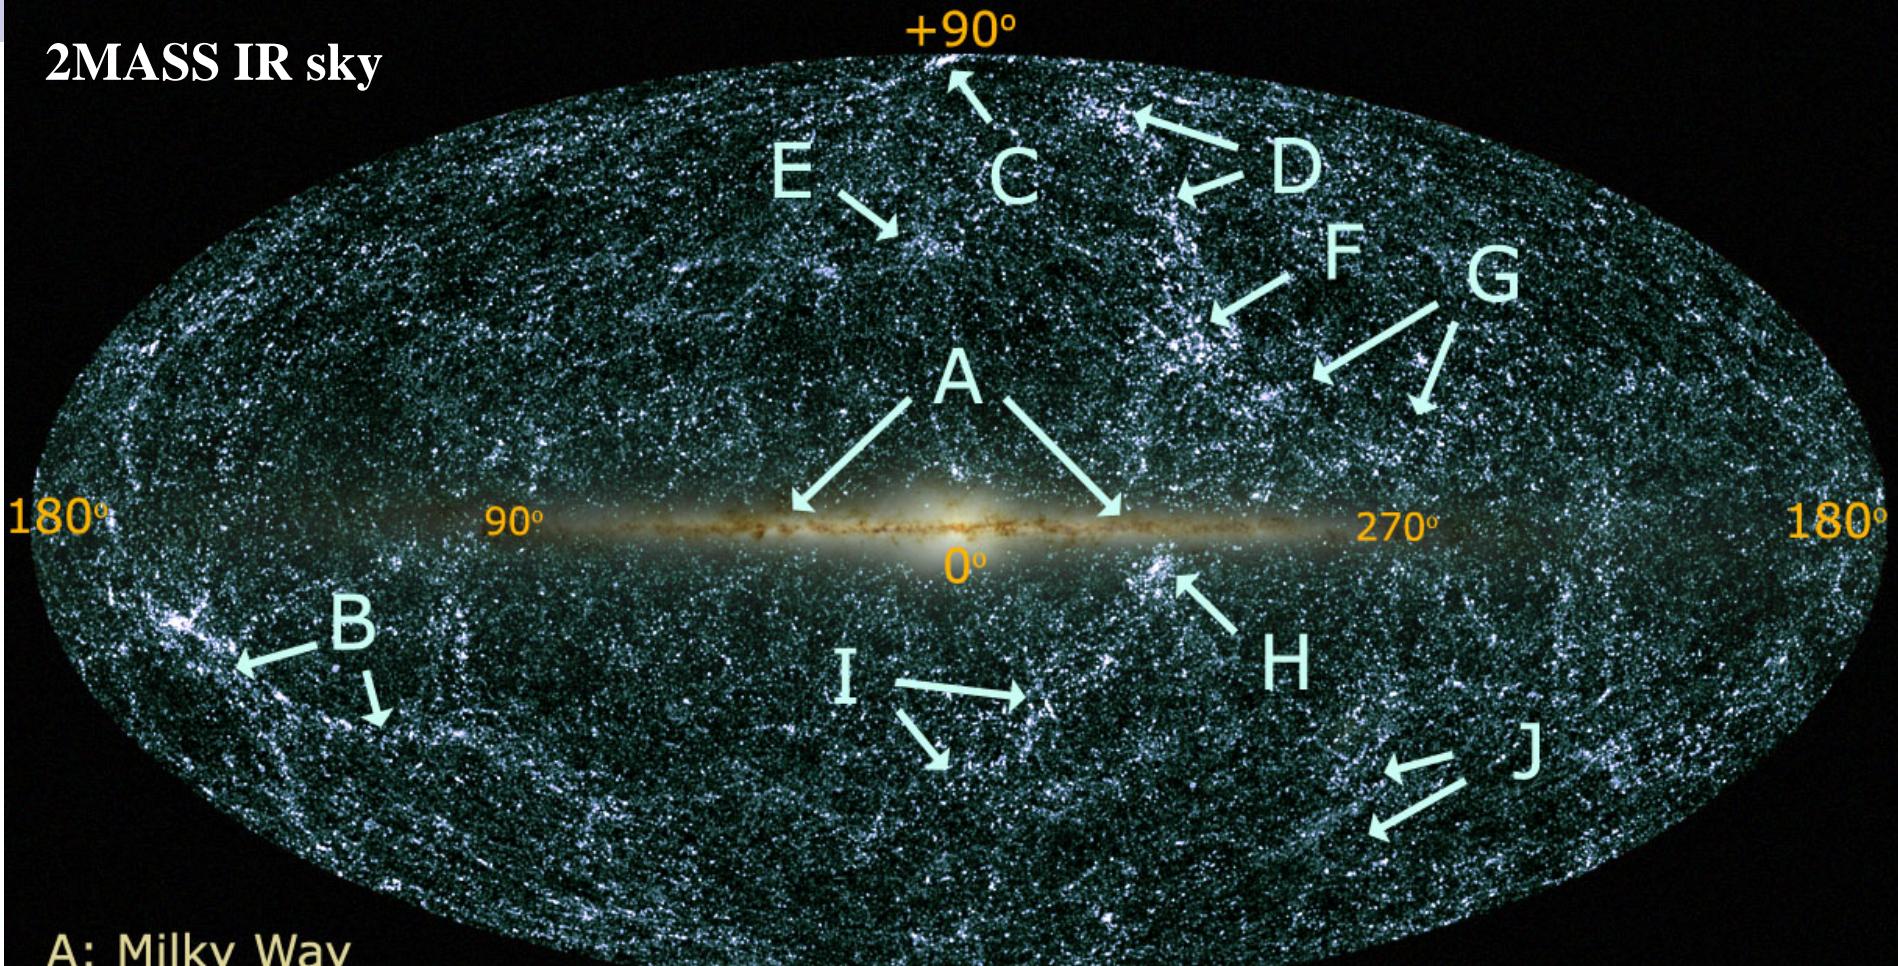

Angular CF as a measure of galaxy clustering developed

Lick catalog of galaxies

Galaxy counts in the northern galactic hemisphere (Seldner et al. 1990)

2MASS IR sky

A: Milky Way

B: Perseus-Pisces Supercluster

C: Coma Cluster

D: Virgo Cluster/Local Supercluster

E: Hercules Supercluster

F: Shapley Concentration/Abell 3558

-90°

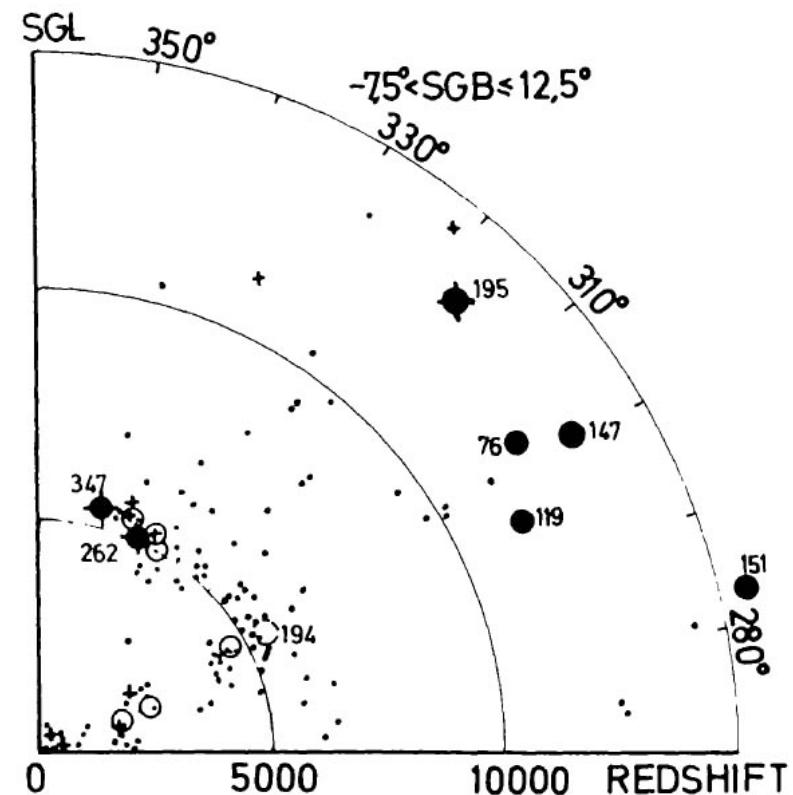

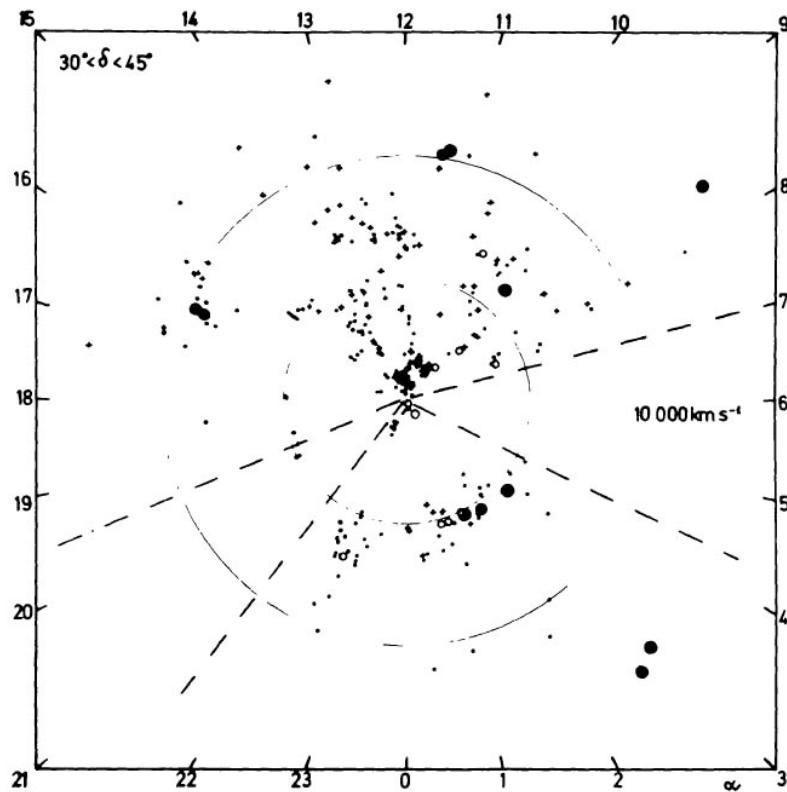

G: Hydra-Centaurus Supercluster

H: "Great Attractor"/Abell 3627

I: Pavo-Indus Supercluster

J: Horologium-Reticulum
Supercluster

Joeveer & Einasto (1978) — Has the universe the cell structure?

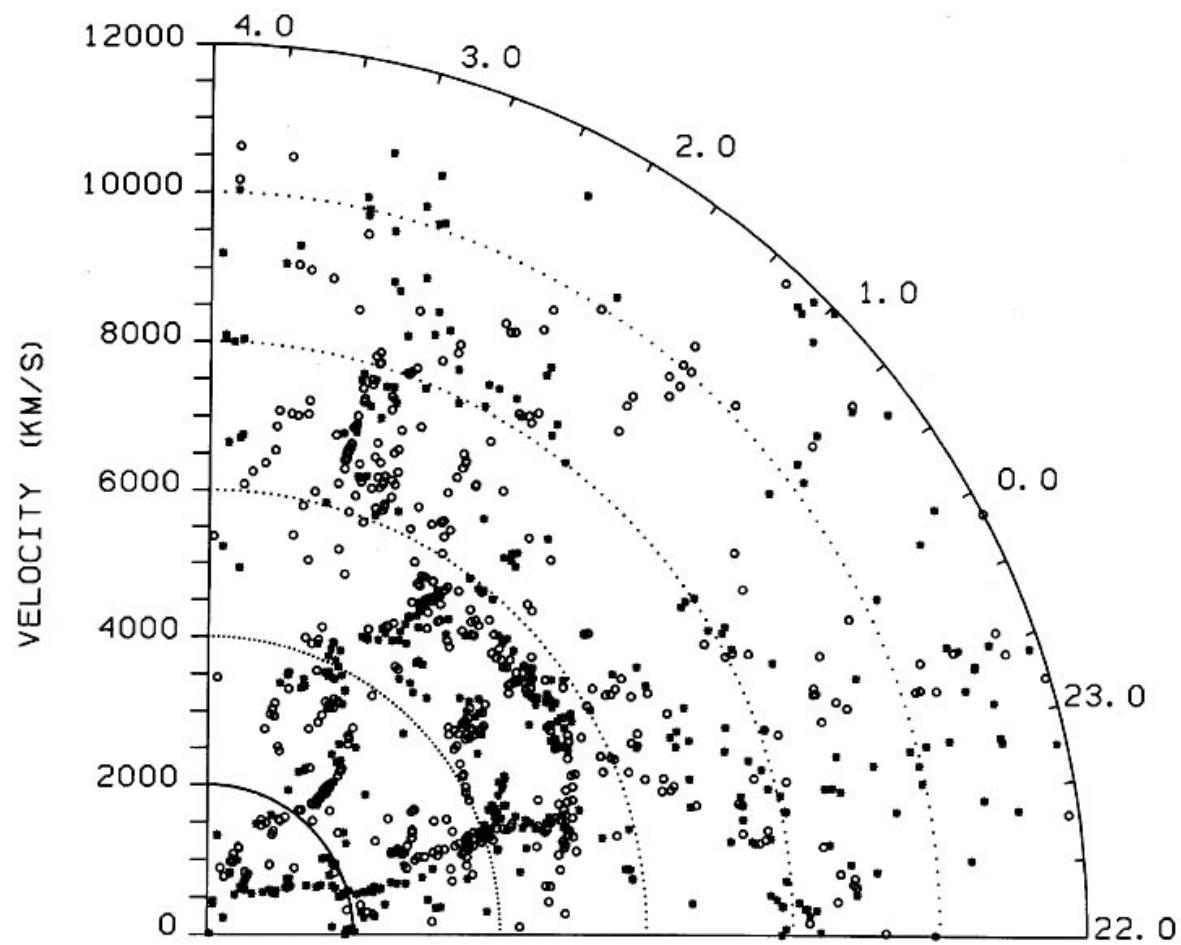

Galaxies and Abell clusters (heavy dots)

Haynes & Giovanelli (1986)

2700 galaxies in the region of
the Pisces-Perseus supercluster

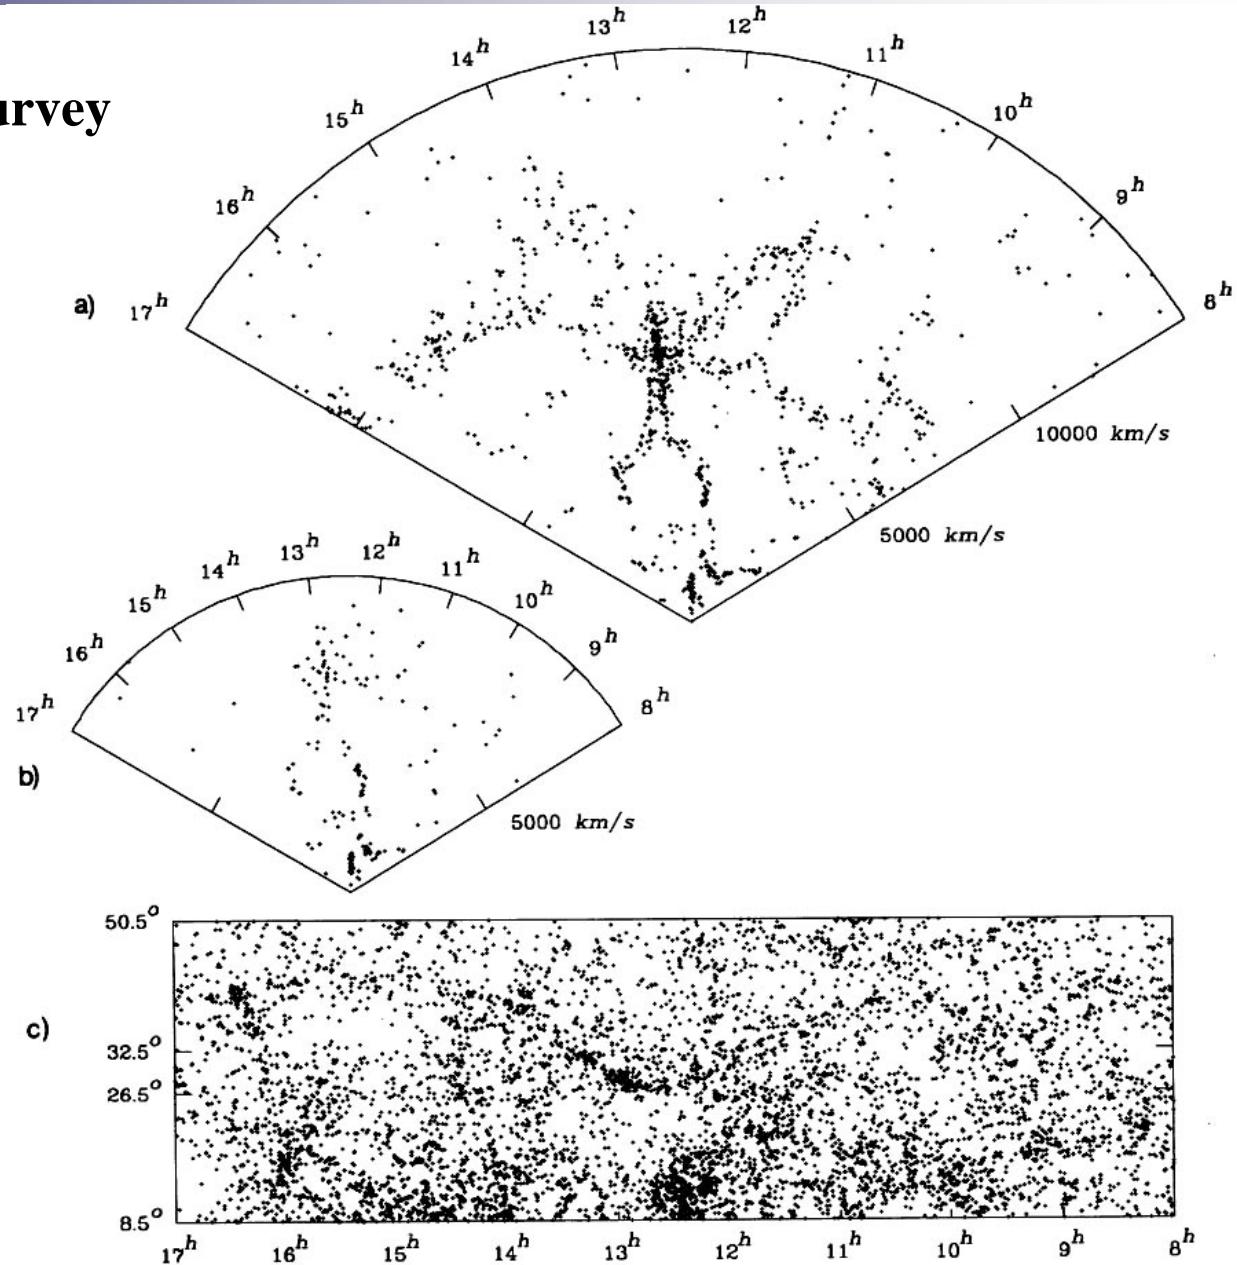

945 galaxies:
asterisks in $10 < \delta < 20$
open circles in $10 < \delta < 10$

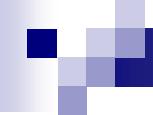

The CfA2 Redshift Survey

(de Lapparent et al. 1986)

1100 galaxies with $m_B < 15.5$
in a slice going through
the Coma cluster

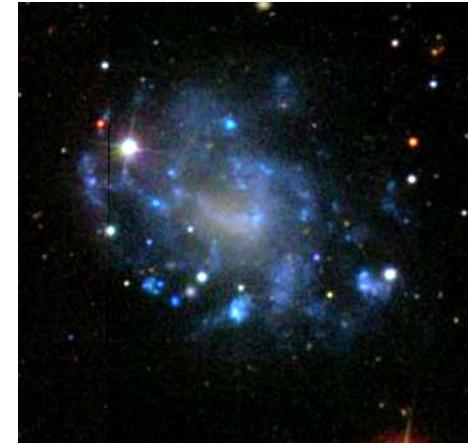

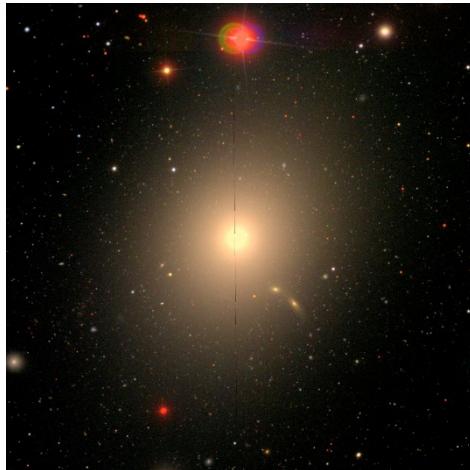

대답되지 않은 의문들

Morphology : a key physical property of galaxies

왜 다양한 은하 형태? : Initial morphology + evolution (성장, 변화, 변환)

Early

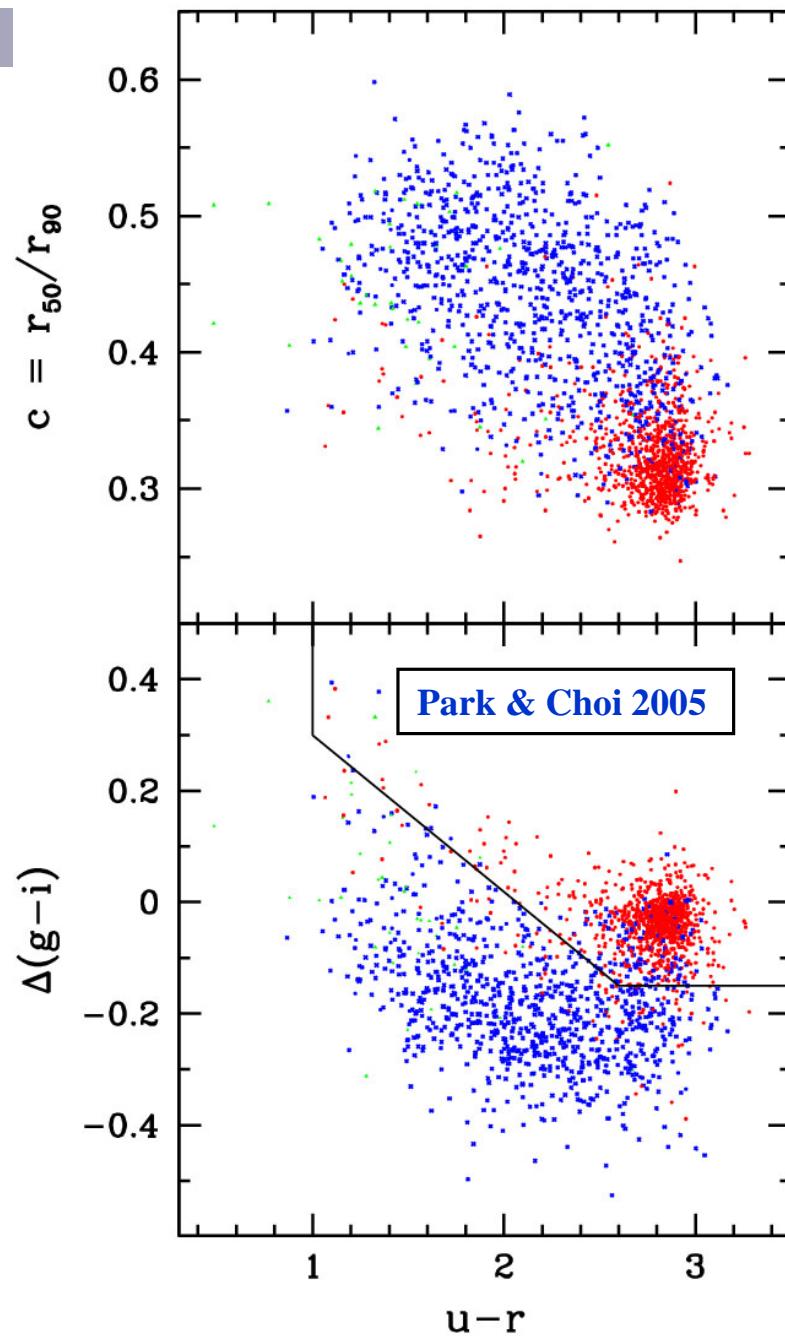

**Red &
compact**

Late

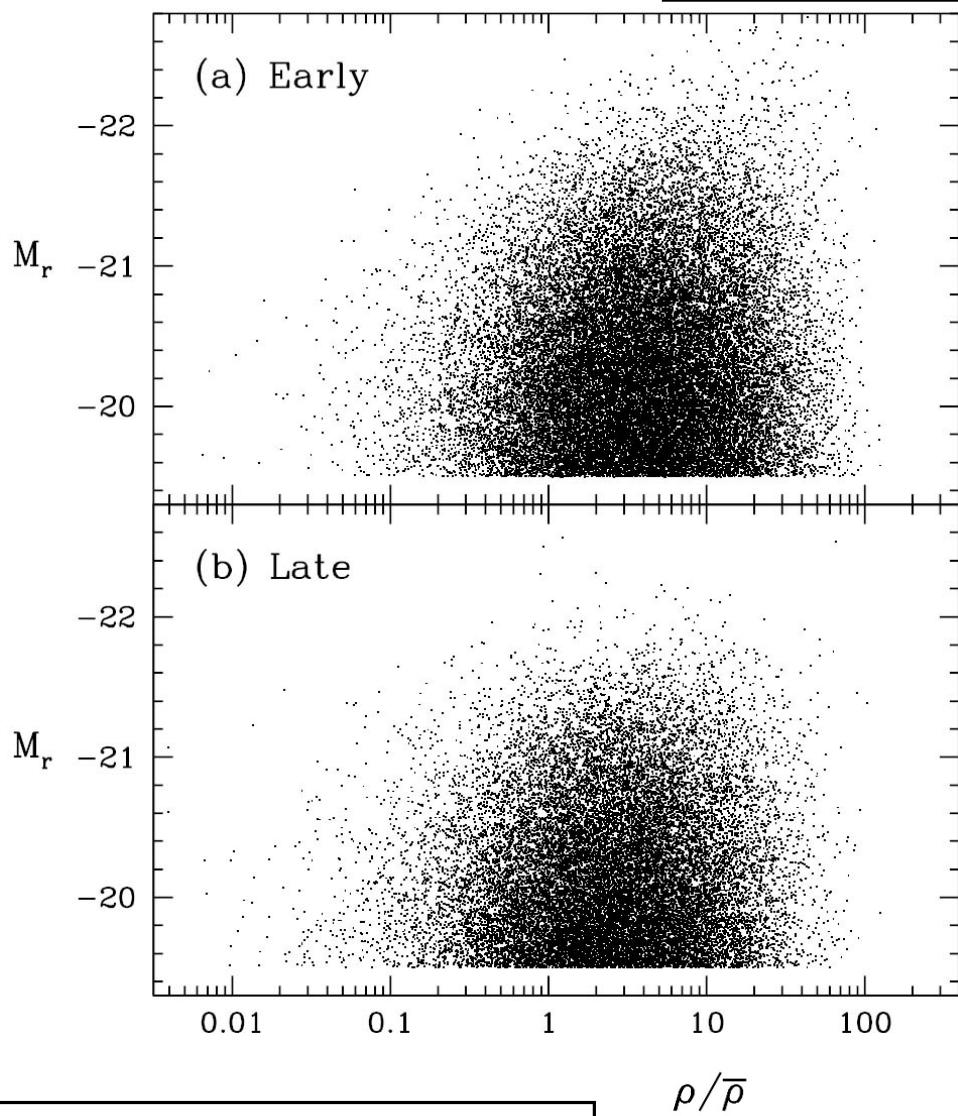

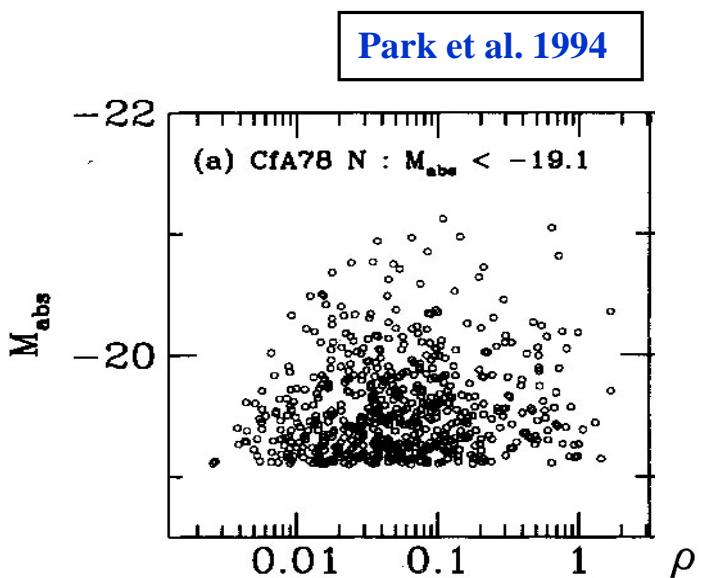

**blue &
extended**

광도함수

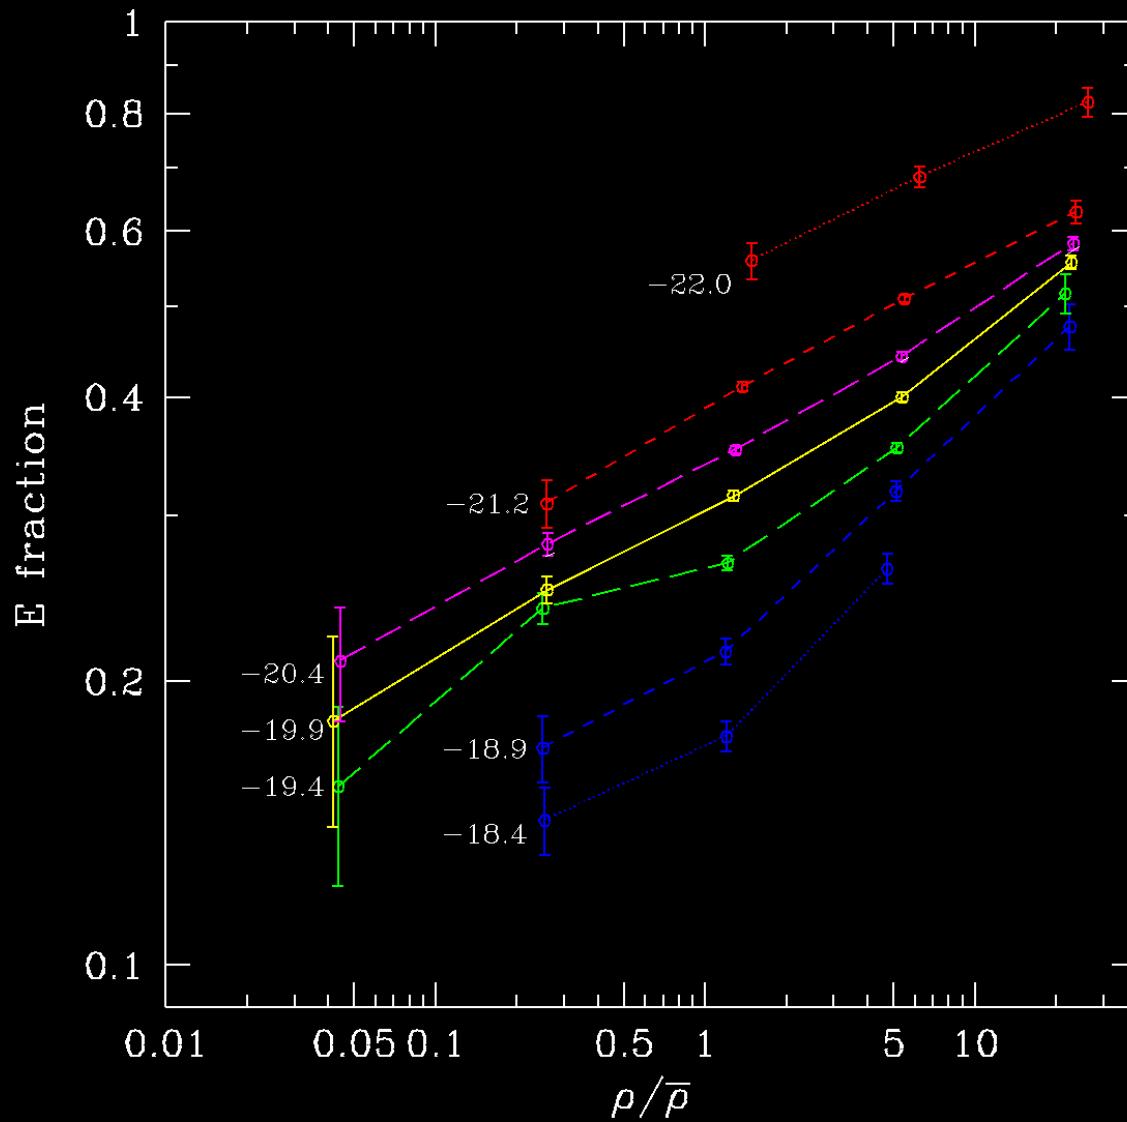

Park et al. 1994

CfA2 Survey [Park et al. 1994] 저밀도지역에 밝은 은하가 없음 !!!

→ 광도함수가 밀도환경에 의존 !

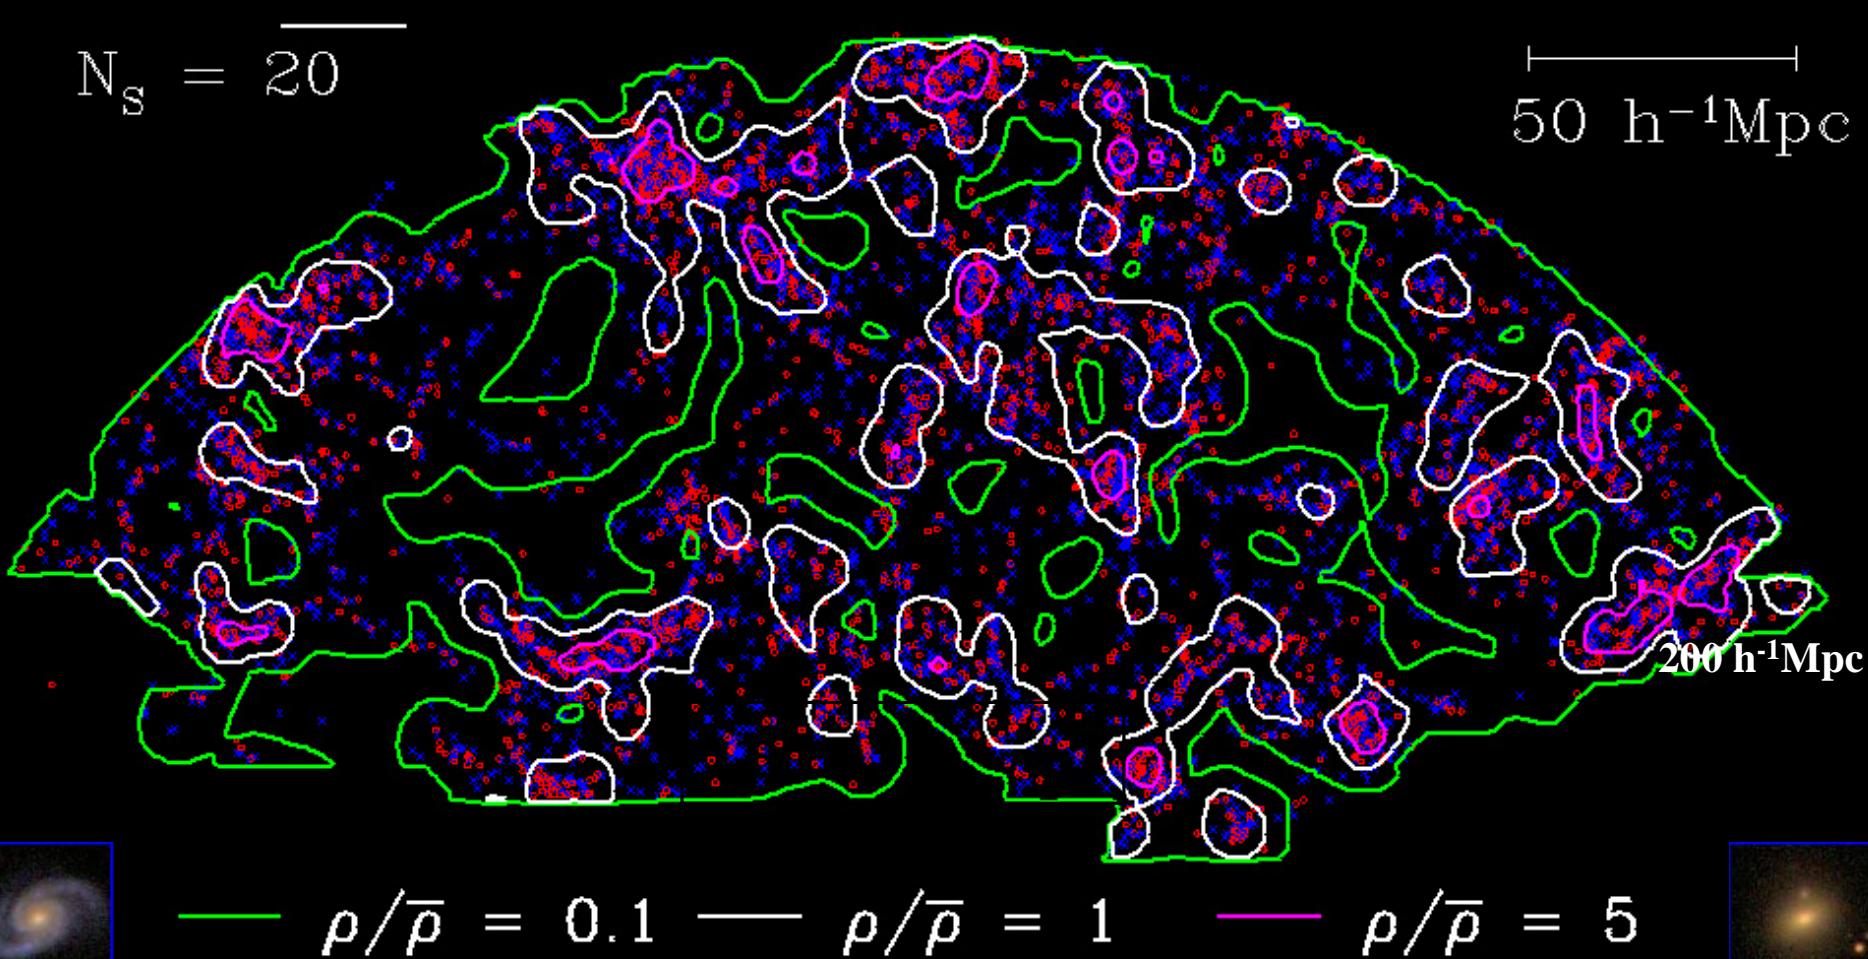

은하형태가 밀도환경에 의존 ! - SDSS Survey [Park et al. 2007]

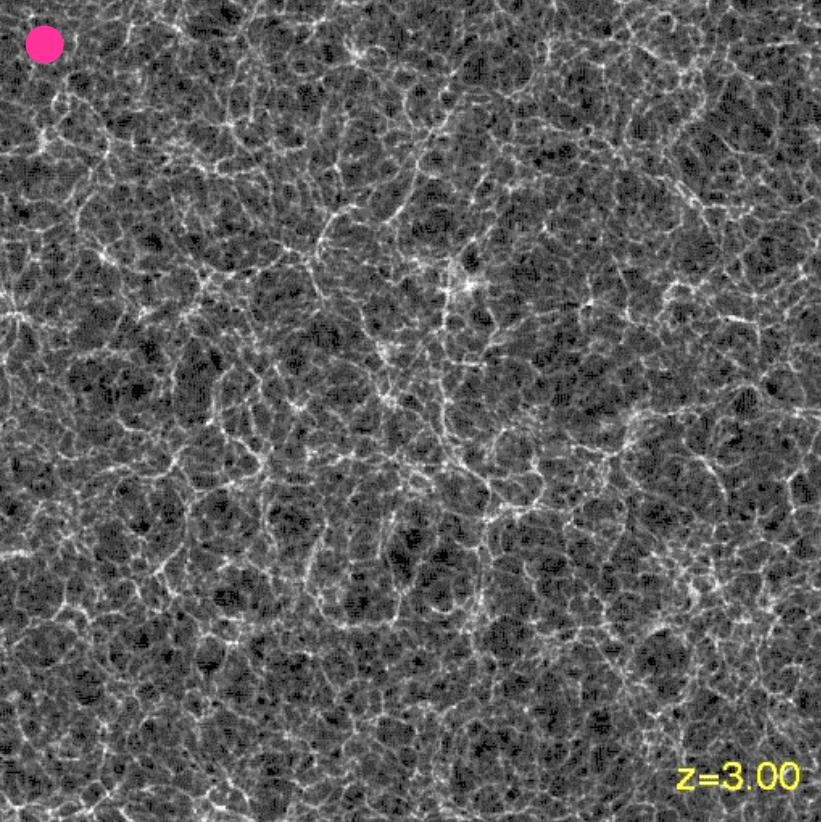

은하성질의 LSS환경 의존성

고밀도 : 밝고, 붉고, 早期形 은하; 저밀도 : 어둡고, 푸르고, 晚期形 은하

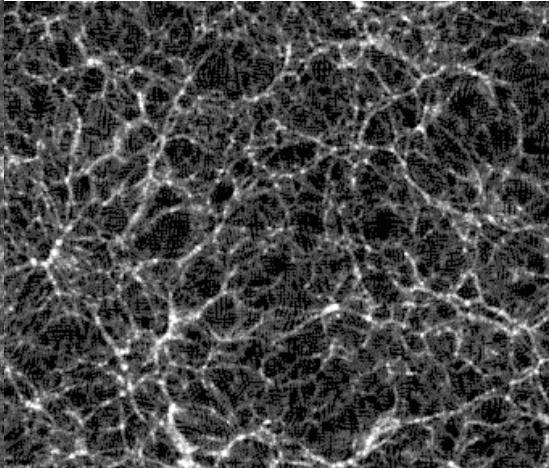

LSS 유형에 따라 은하 성질 차이? – cluster/filament/wall/void

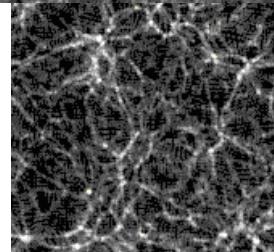

우주모형의 시간적 진화

$z=3.00$

$z=1.00$

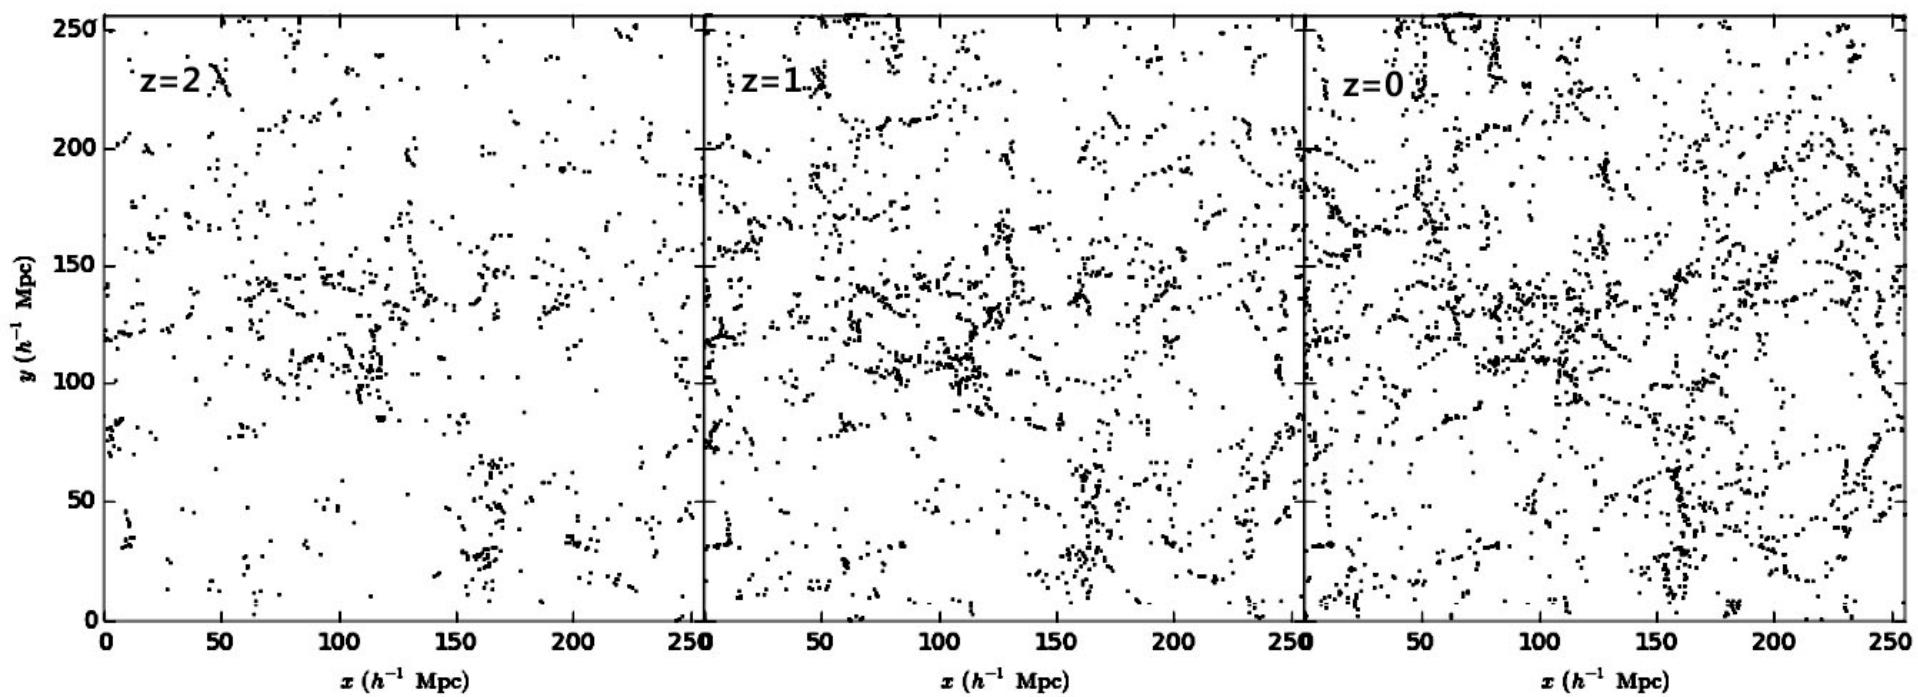

$z=0.00$

Kim & Park (2004)

Λ CDM 2048^3 IBM p690+

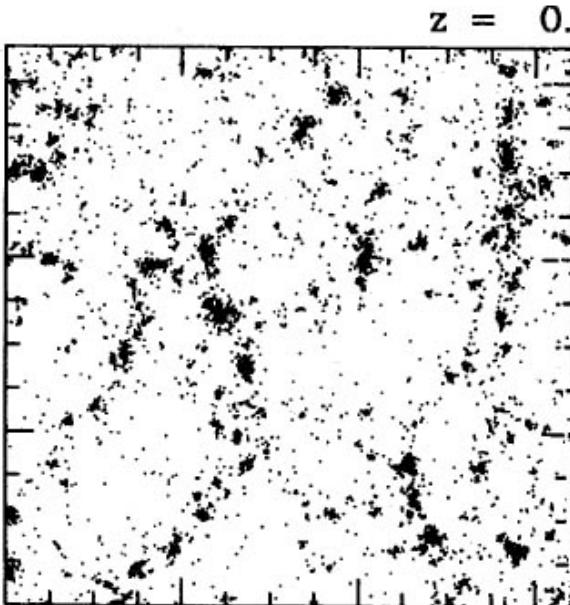

2004 KISTI 슈퍼컴퓨팅센터 Grand Challenge

Formation and clustering of dark matter halos

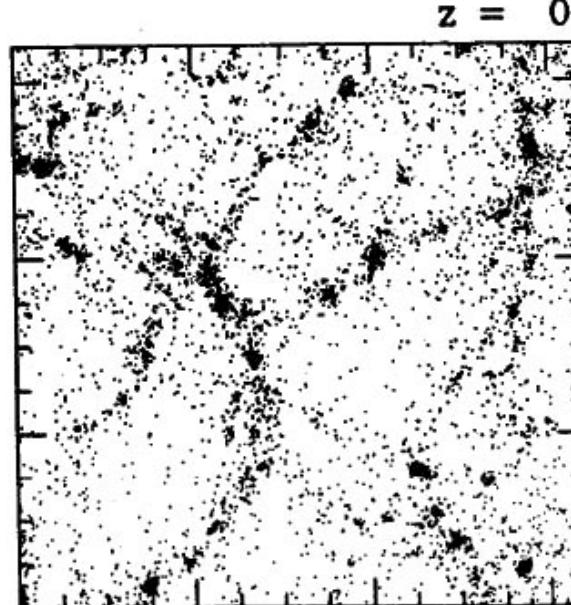

우주모형(power spectrum 모양)의 차이

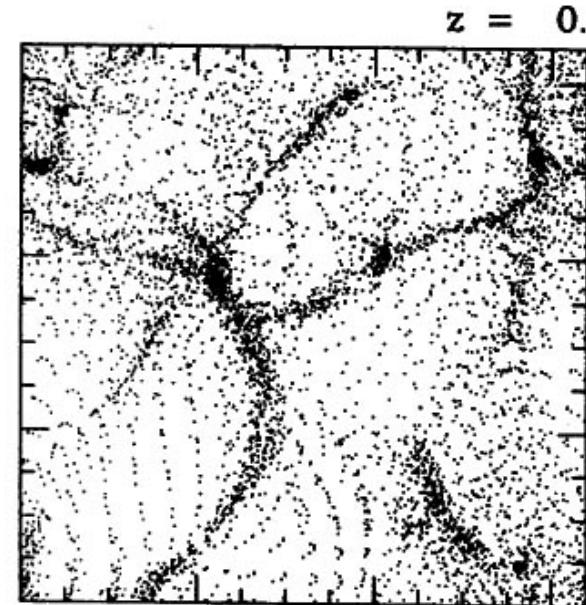

White noise

CDM

HDM

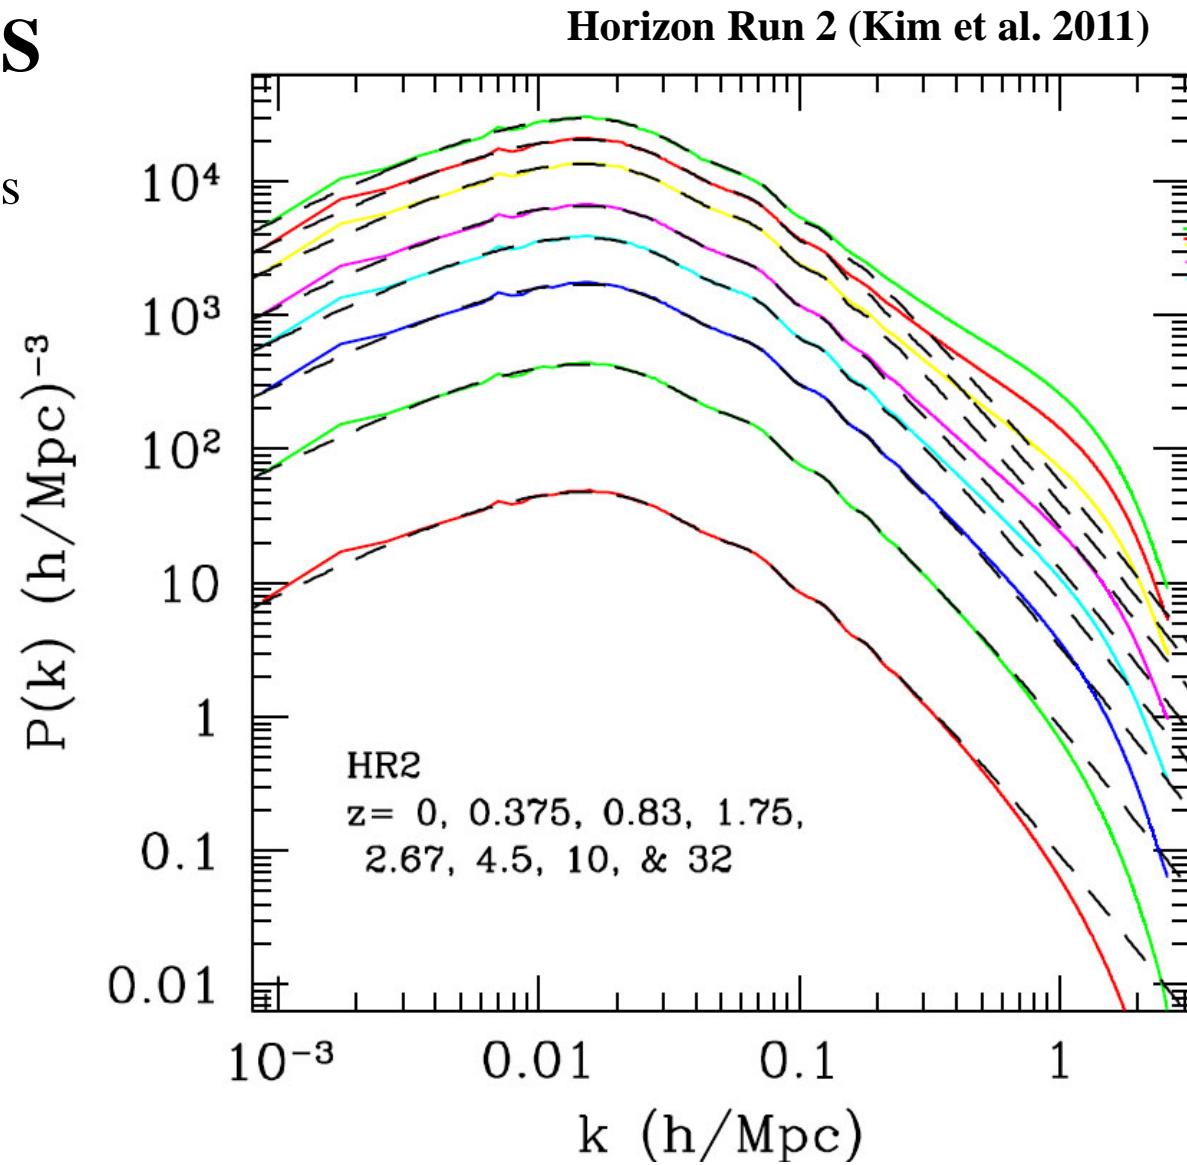

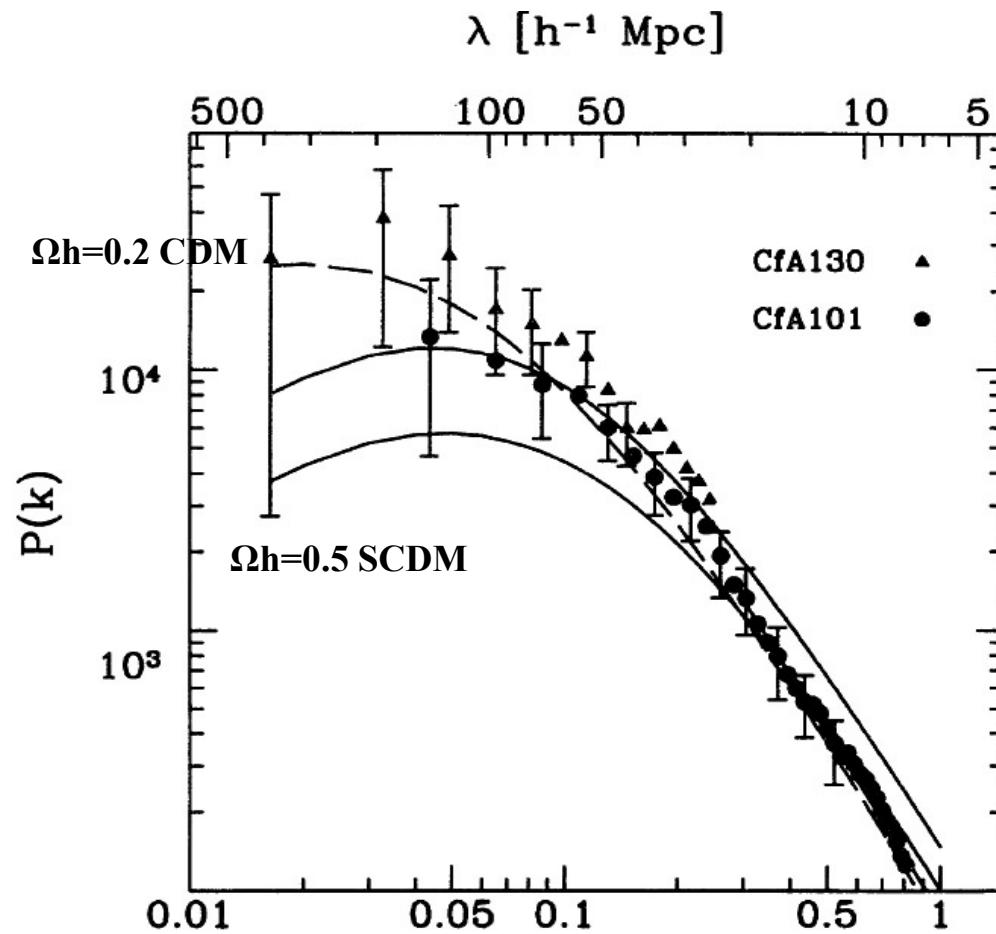

LSS의 모양, 크기, 은하성질...
은 우주모형에 따라 크게 다르고
우주의 시기에 따라 크게 다르다!
- 관측된 우주는?

Weinberg & Gunn (1990)

Evolution of PS

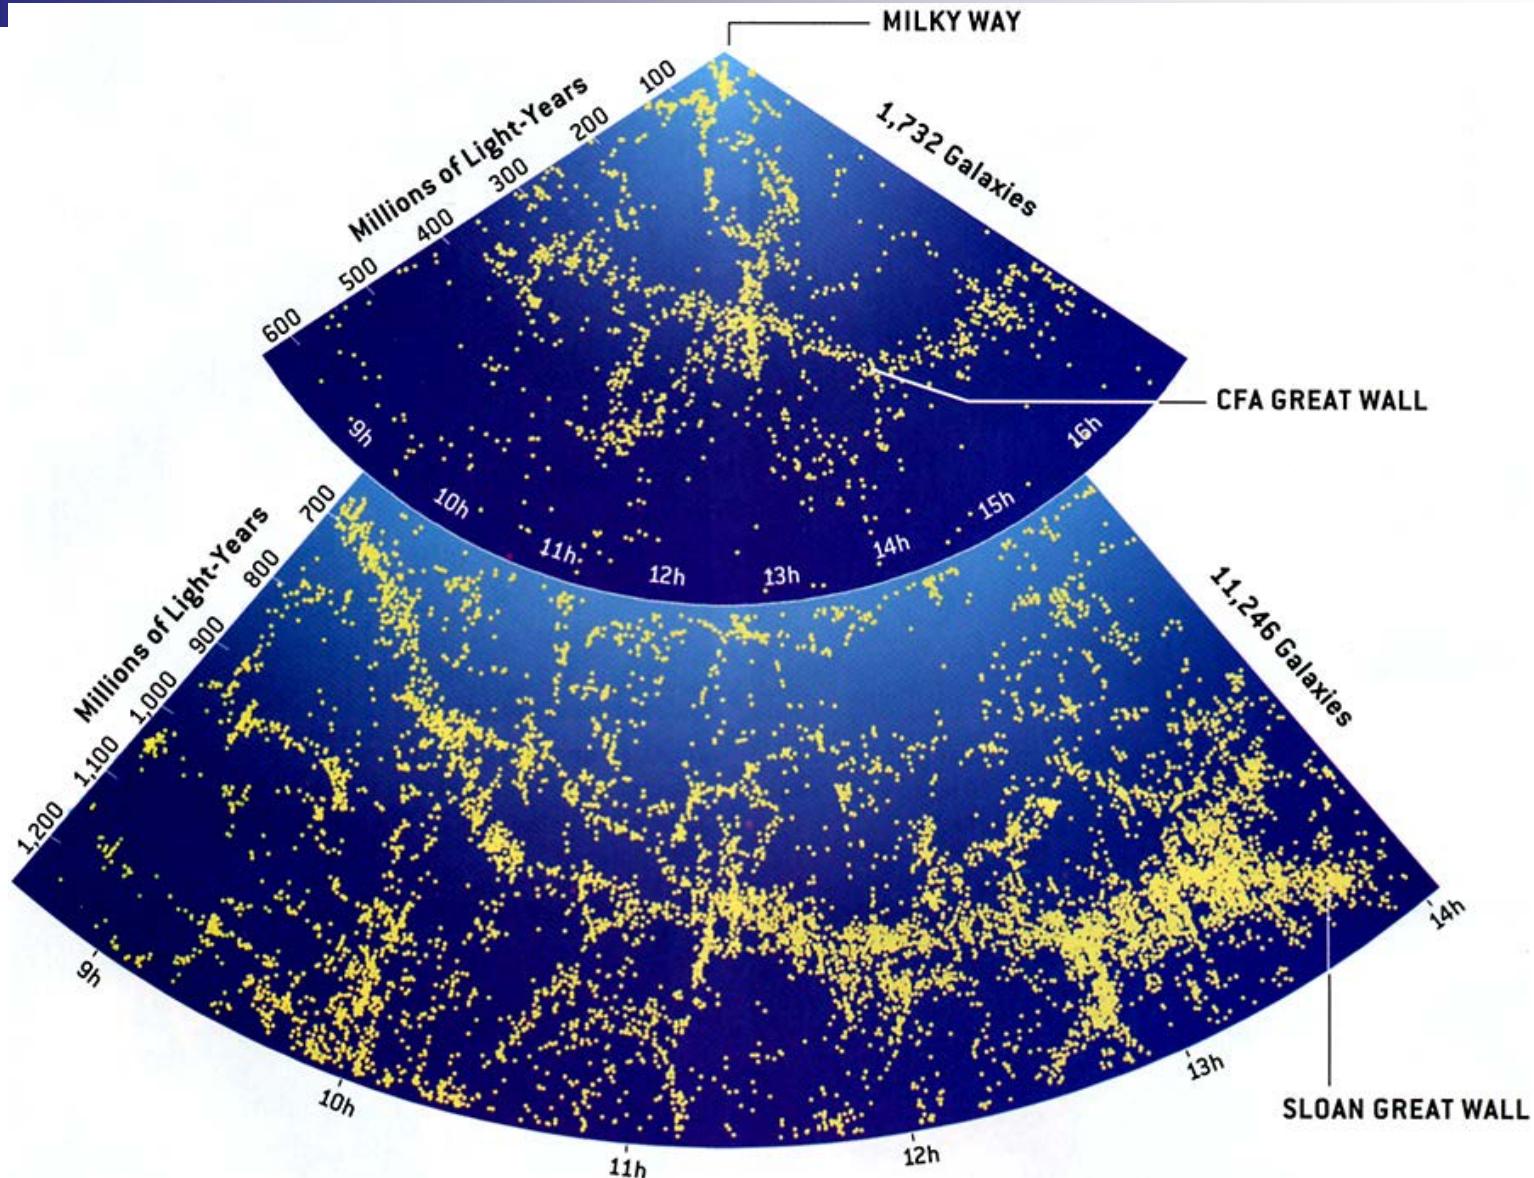

: Growth
of density fluctuations

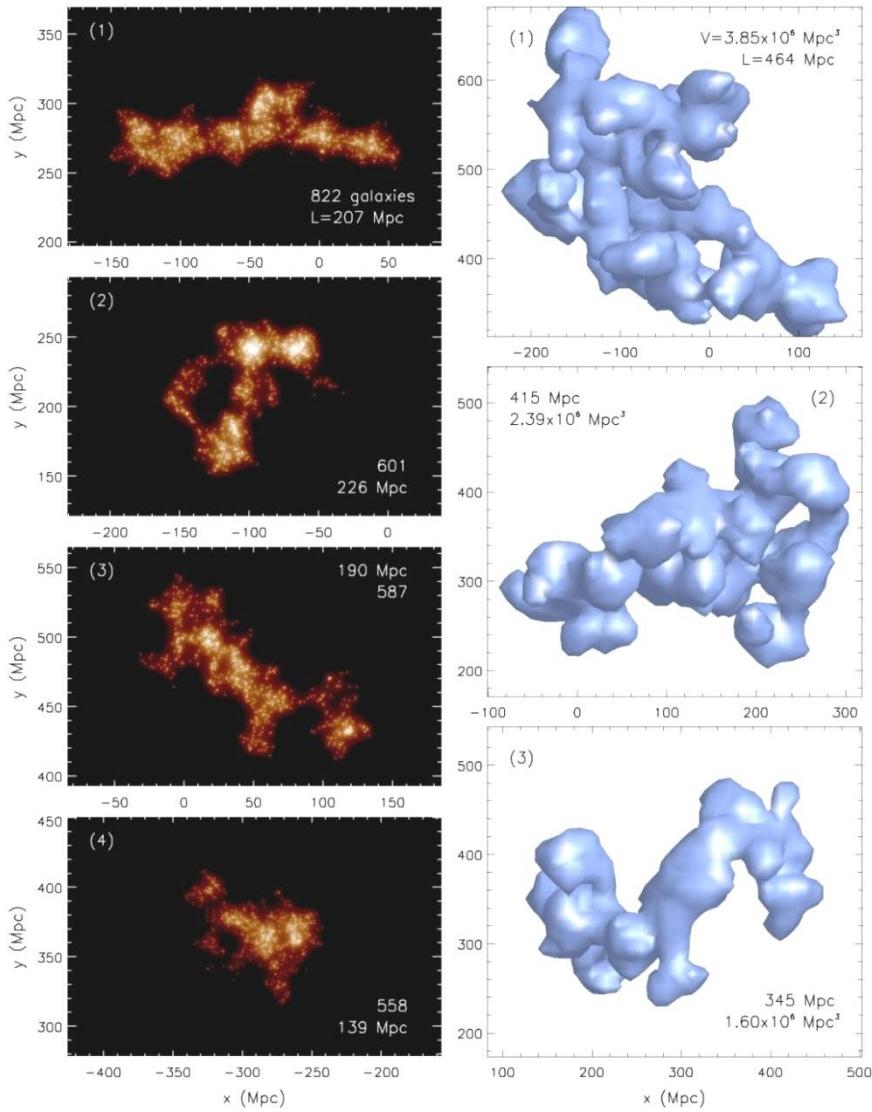

[Park et al. 1992, 1994]
First galaxy PS measured

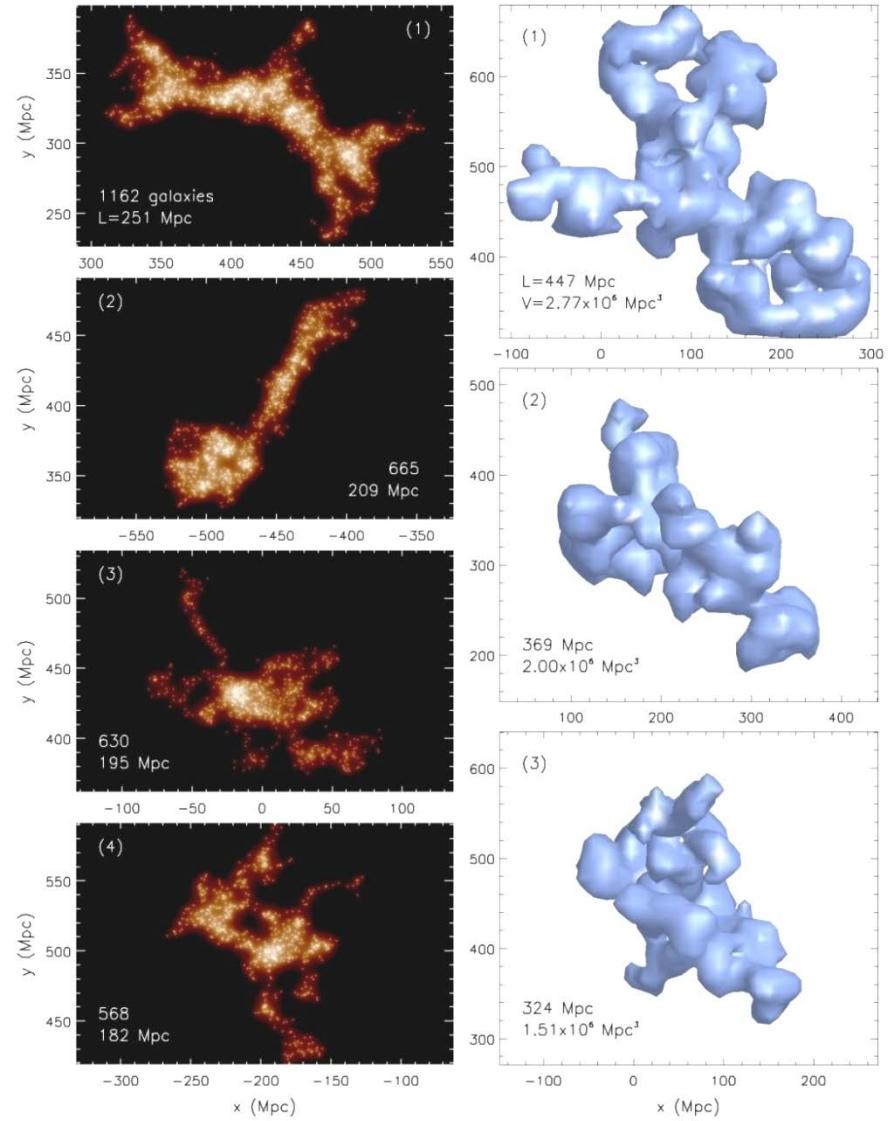

: Shape of galaxy PS on very large scales and very small scales

How large is the largest structure of the universe?

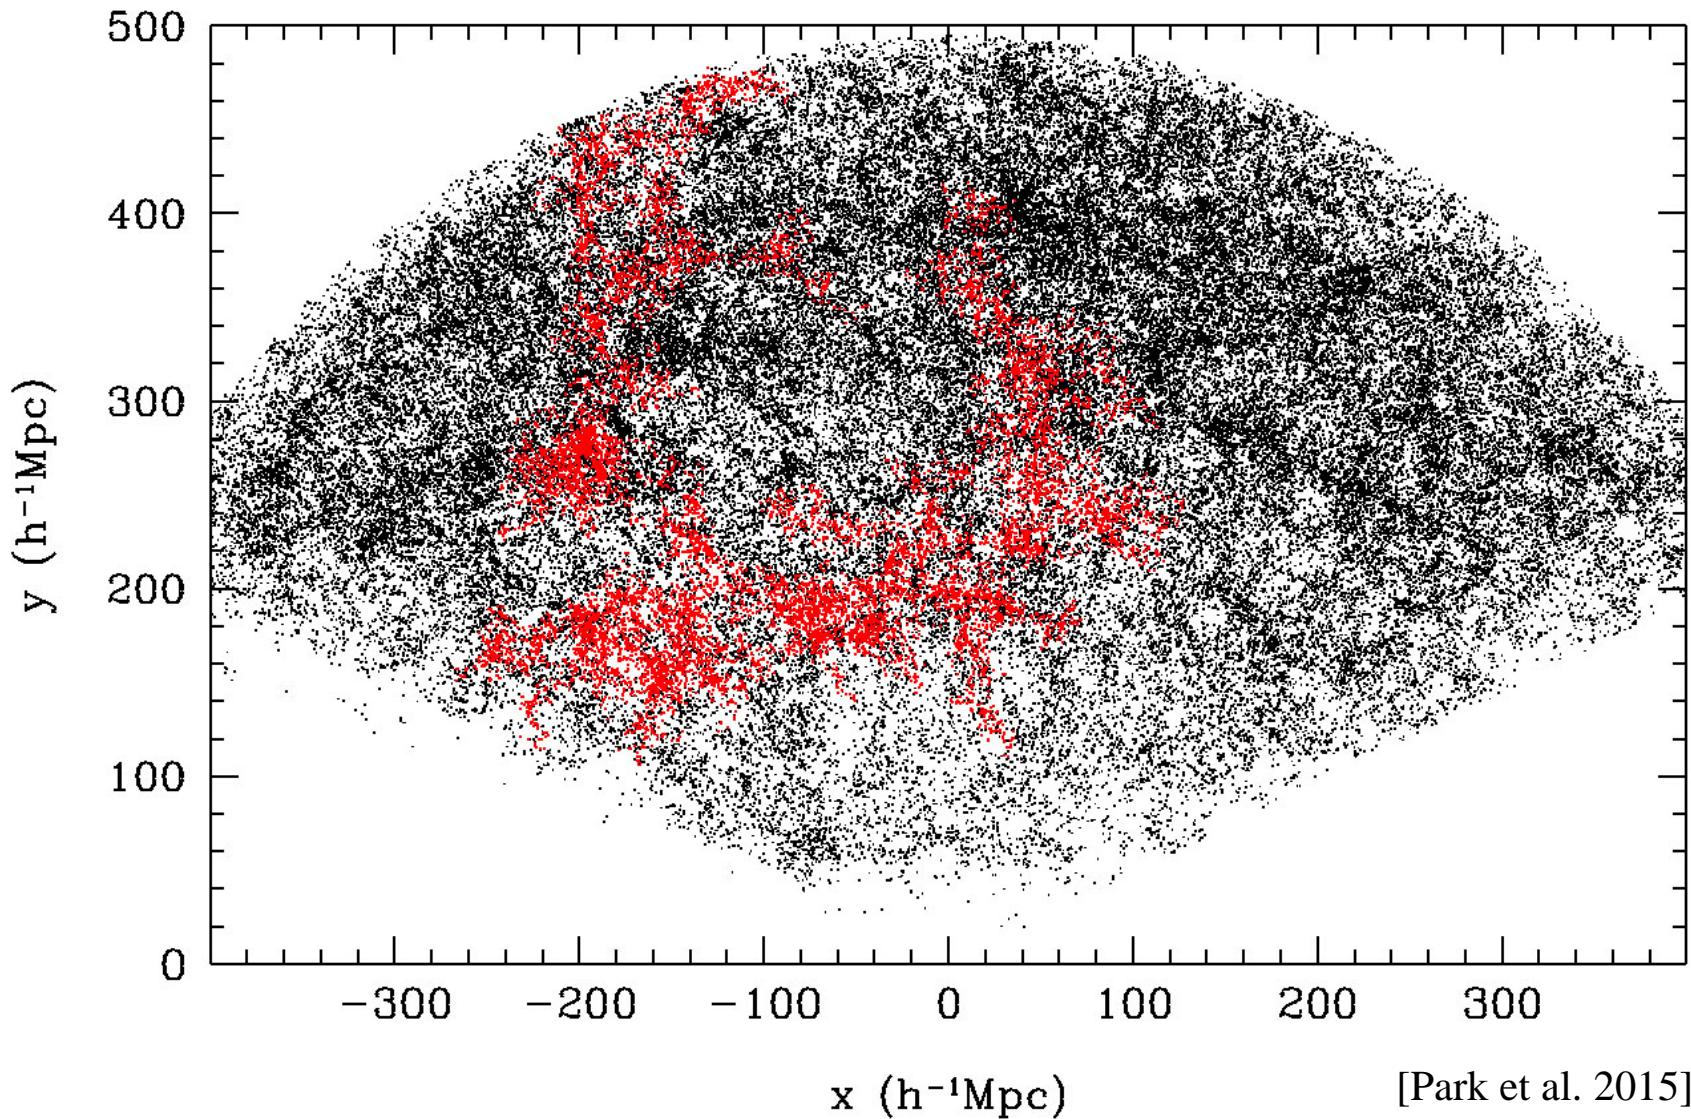

Top 4 high-density and top 3 low-density LSSs from DR7

Median top 4 high-density and median top 3 low-density LSSs from mock DR7 in HR2

Super-scale structures of LSSs / LSS across redshifts

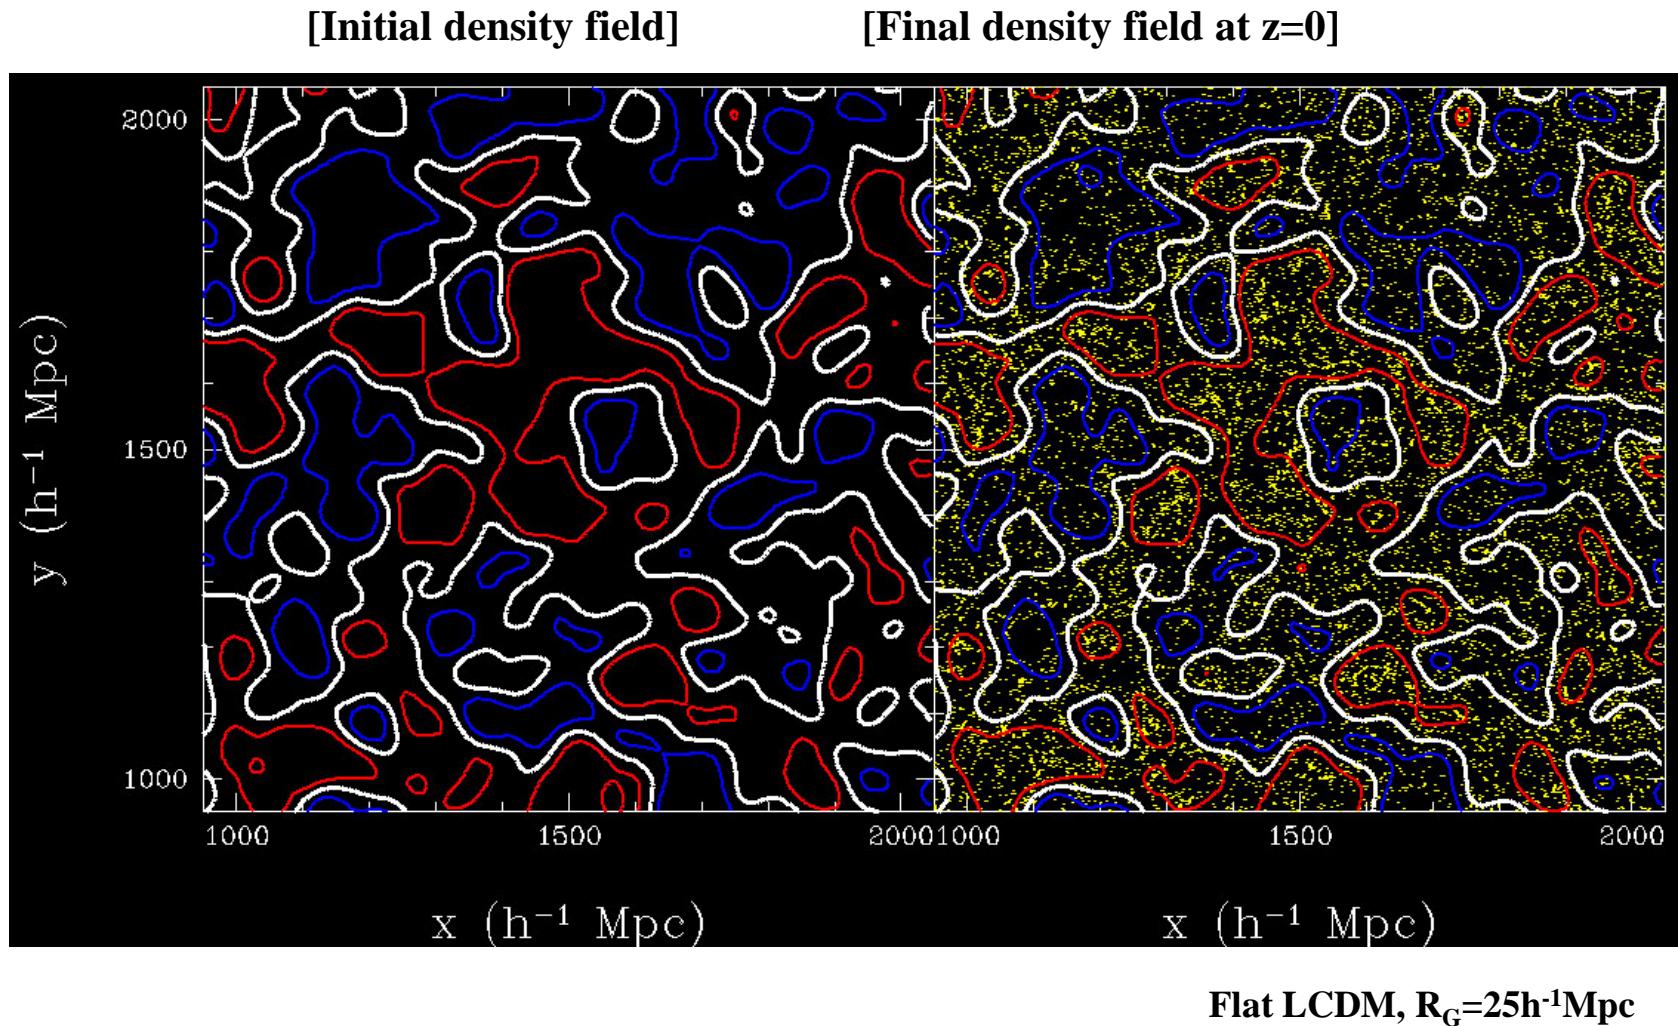

– How to define ‘cosmic structures’ at different epochs?

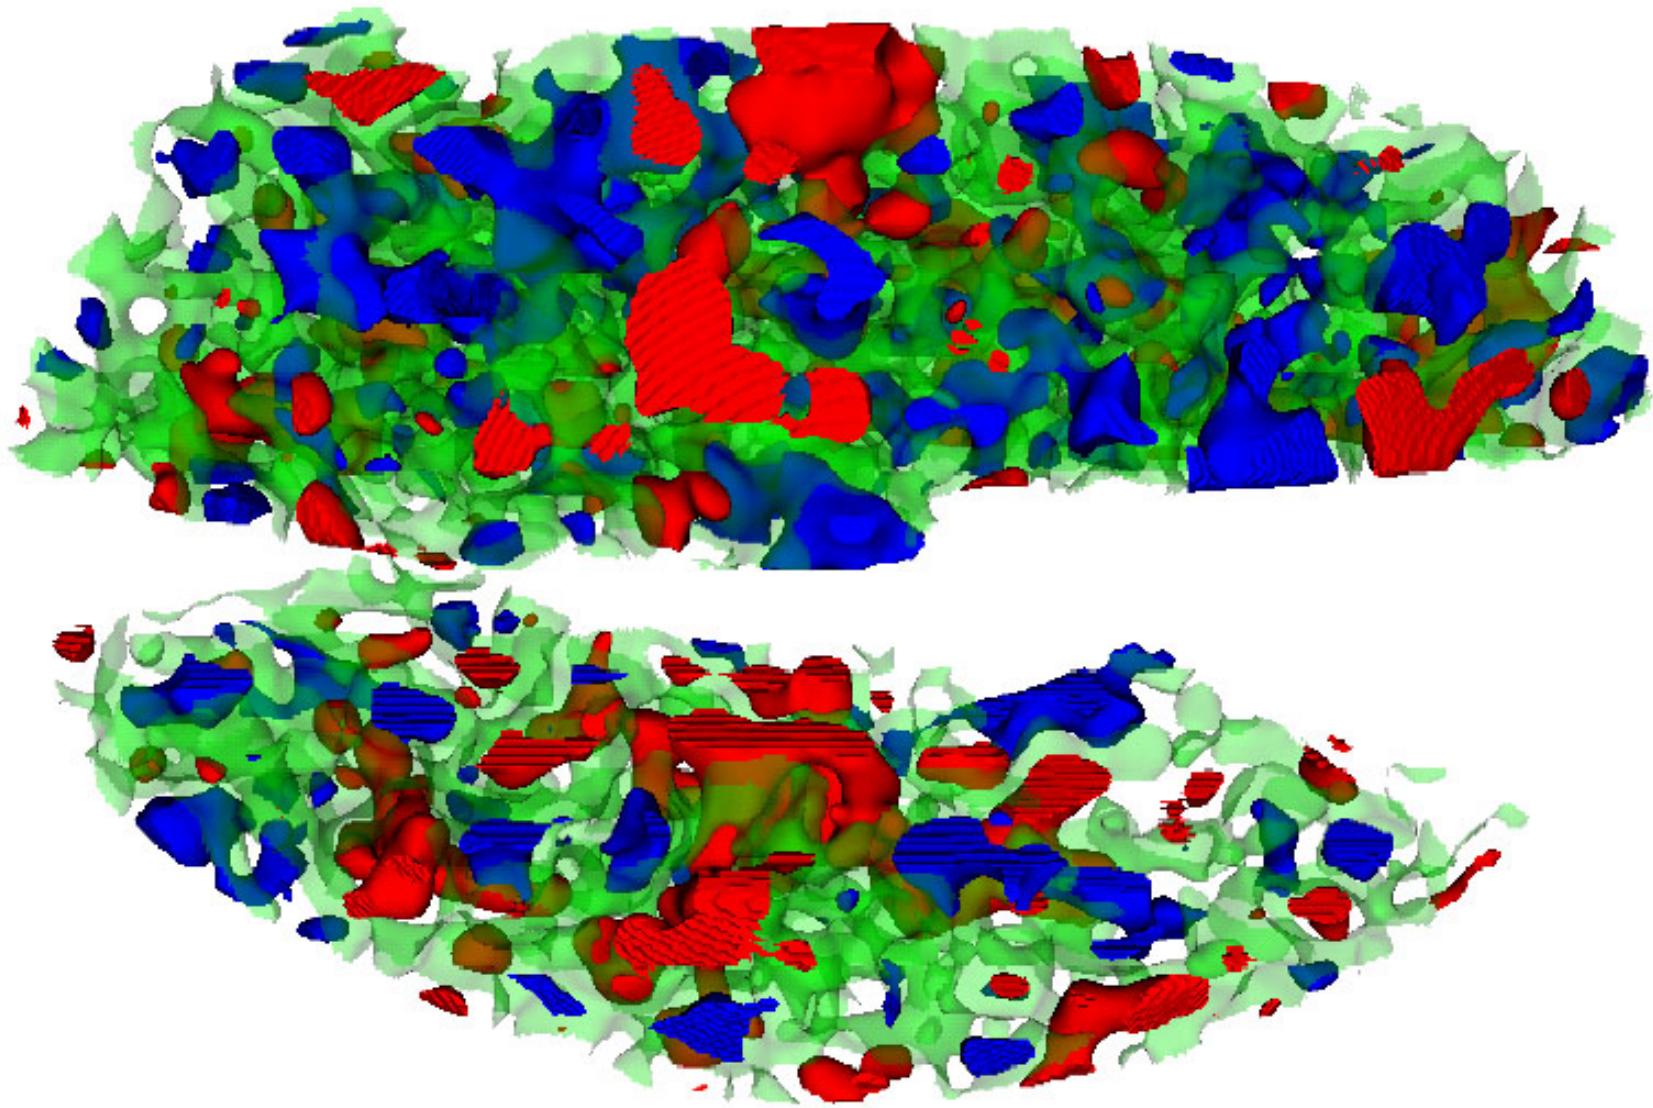

[Park et al. 2015]

Cosmic sponge conserved [Park & YR Kim 2010]

LSS in linear regime maintains the primordial sponge topology at all redshifts!

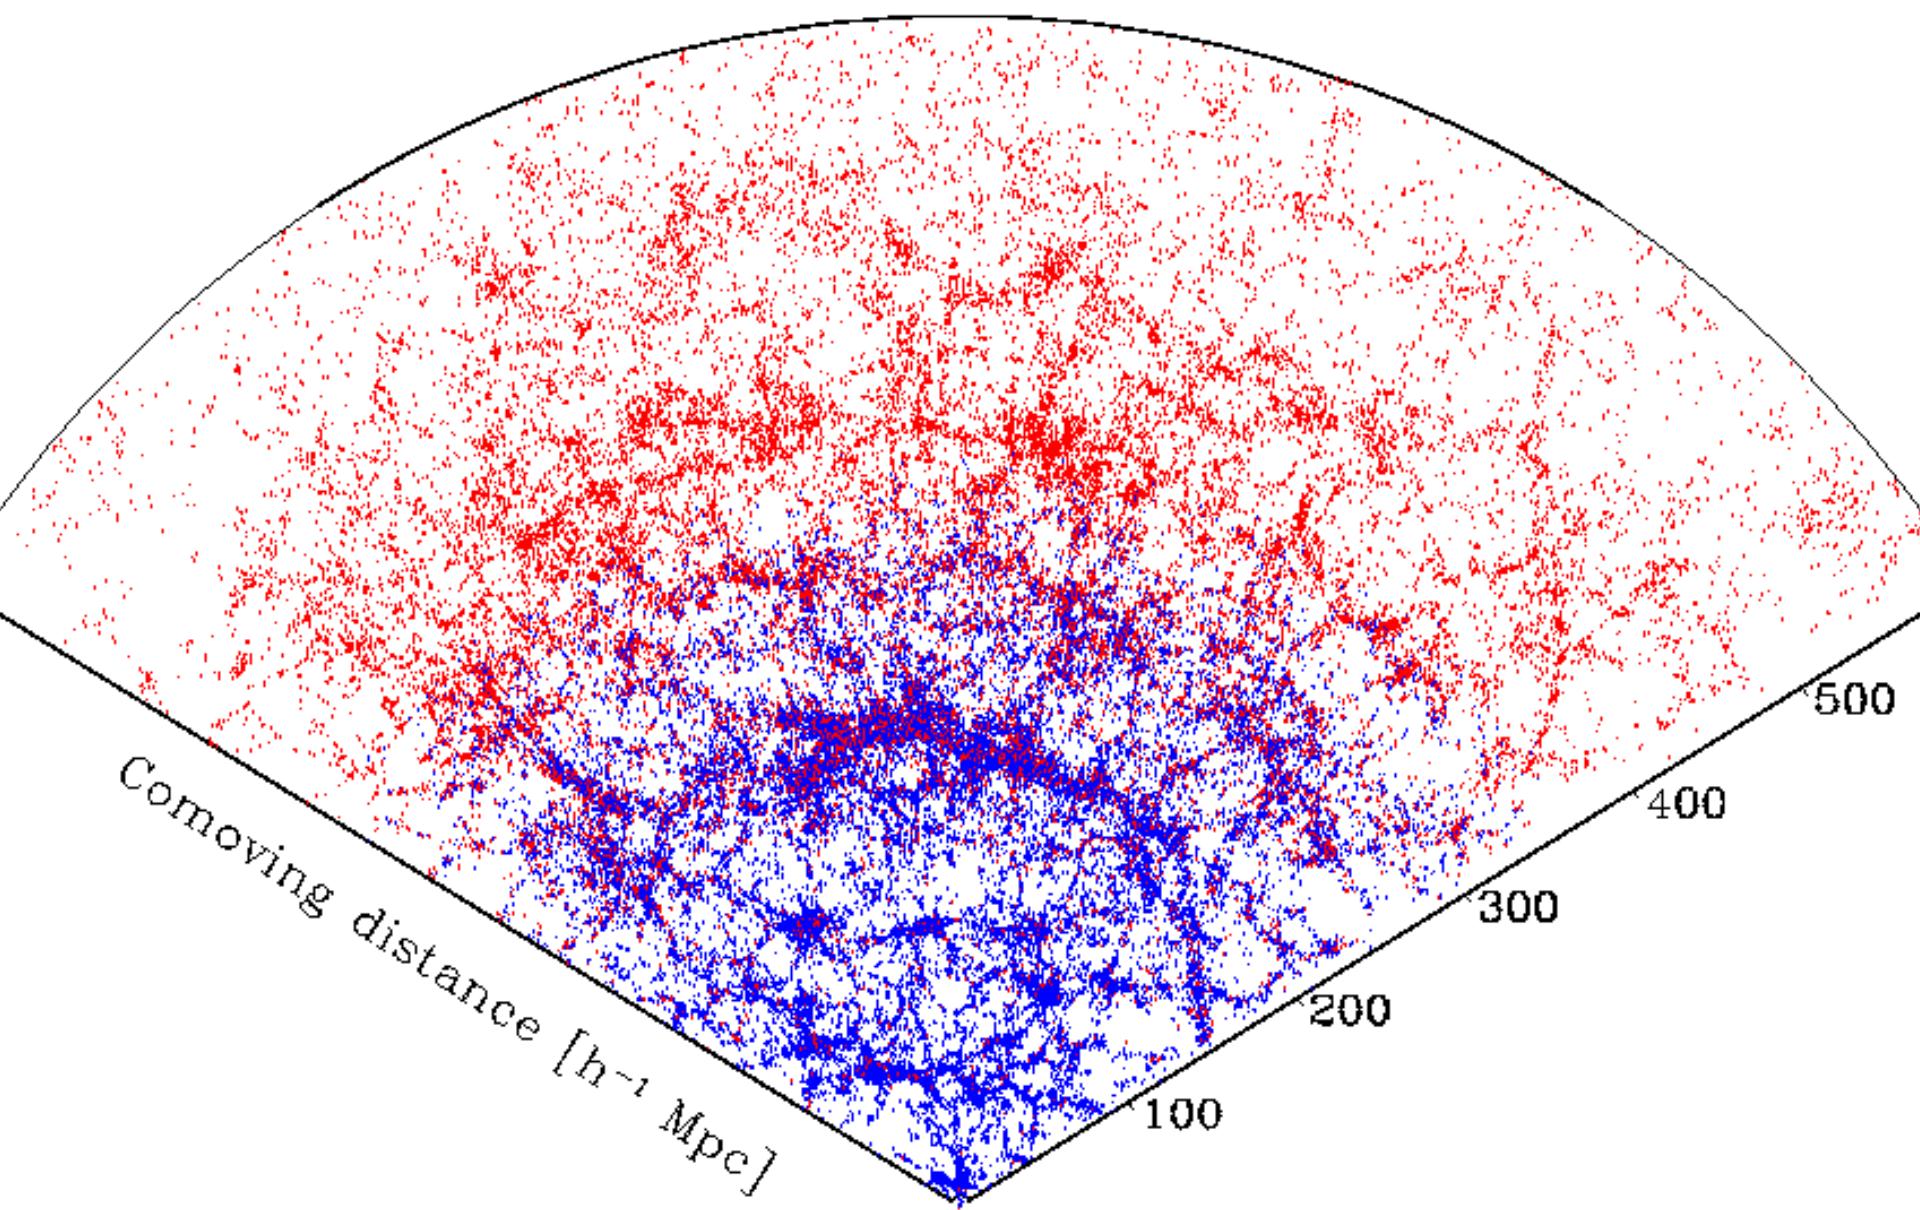

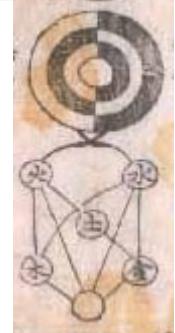

Connectivity of over-density and low-density regions

Voids (blue - 7% low), filaments/clusters (red - 7% high) SDSS DR4+ (Gott et al. 2008)

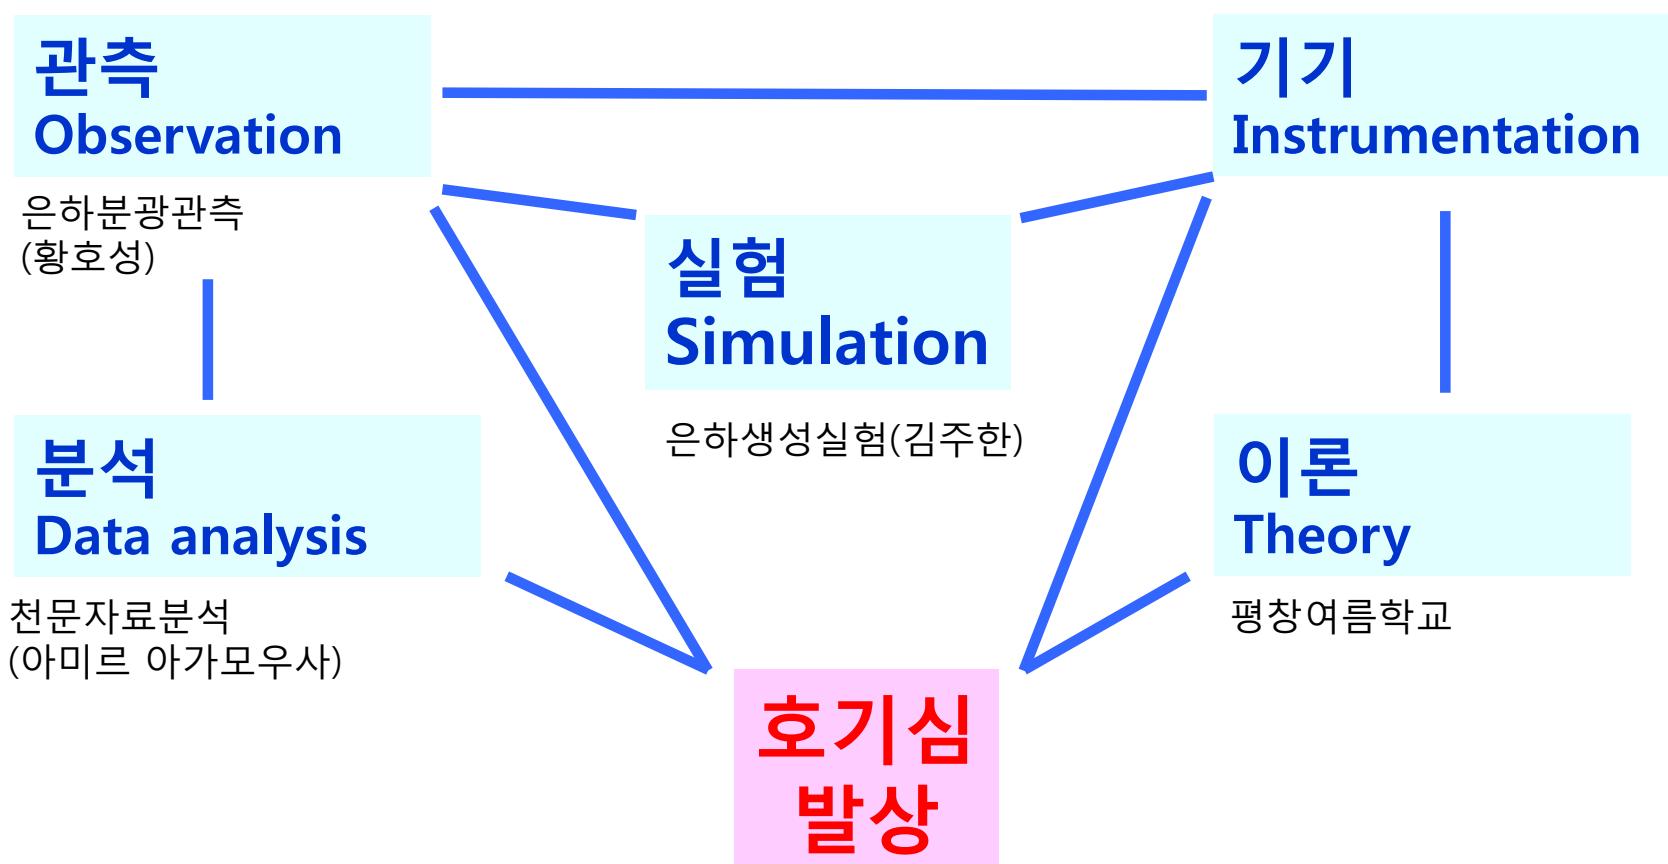

Cosmic Ripples – A phase-correlation feature associated with the Sloan Great Wall?
